Investment Summary

Highlights

Investment: 2026 – Disinvestment: 2031

Returns:

IRR
28,9%

In 6 years

2,71x
MOIC

EV/EBITDA

Entry	*Exit*
8,1X	***7,3X***

Deal Strucutre

Offer	*% of Vasta*
R$ 876mi	***15,0%***

Investment Thesis

I. A Portfolio Built To Stick
II. Safe And Predictable Business Model

Value Creation Plan

I. Northeast Expansion
II. Educbank Acquisition

Rationale

Entry

Cogna's take-private opened a private minority window

1 Delisted Jan '26
Cogna's OPA closed the public market - entry is now private

2 Cogna is deleveraging
Avoids fresh debt, so primary equity is the natural funding route

3 R$876mm → 15%
Funds NE + Educbank; Cogna keeps control & 85% of the upside

Exit

Public exit died at delisting - so we engineered it by contract: ***put 2031–32, tag-along, CDI pref & board veto***

Buyback by Cogna
Natural, contractually-supported buyer; 85% of created value accrues to Cogna
6.9x EV/EBITDA · **26.2%** IRR

Secondary Sale
Financial players - active in BR edtech or willing for a safer yet great return
7.3x EV/EBITDA · **28.9%** IRR

Risks

Educbank integration	Quality erosion → churn	Macro / B2G cut
−4,9% IRR	**−4,8% IRR**	**−2,3% IRR**

Vasta at a Glance

Premium clients and long-cycle relationships translate into predictable, recurring economics

Leading B2B K-12 private education platform in Brazil

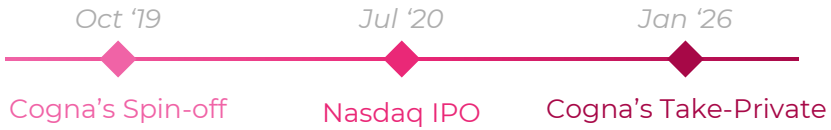

Core: Anglo & pH - the *gateway* into Vasta's ecosystem, schools join for Brazil's most prestigious learning systems

Complementary: English Stars & Líder em Mim - the *anchor*, every add-on deepens the relationship and reduces churn

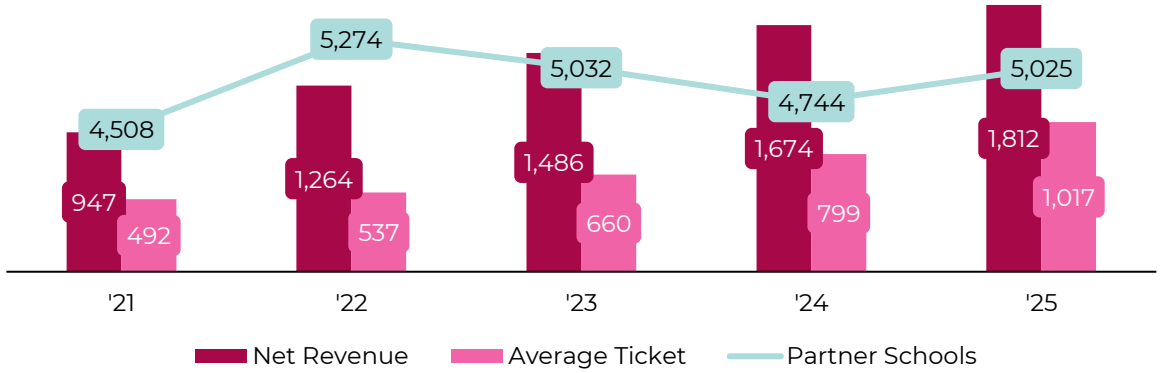

Digital Platform: Plurall - the backbone that ties everything together, creating structural lock-in across the ecosystem

Vasta's Timeline

Quality over quantity: consistent ticket growth

anglo	pitágoras	amplia	Sistema de Ensino pH	Sistema Mackenzie de Ensino
~850 schools	~600 schools	~600 schools	~460 schools	~330 schools

Key Stats

Net Revenue	EBITDA	ND/EBITDA	Partner Schools	Core Students

The One-stop-shop Education Platform

Integrated variety guarantees superiority over regional competitors, leaving Arco as a mirror rival

Core Education: Brazil's most recognized *learning systems*, anchoring long-term contracts and high switching costs

Digital Platforms: Technology layer that creates *structural dependency* beyond content

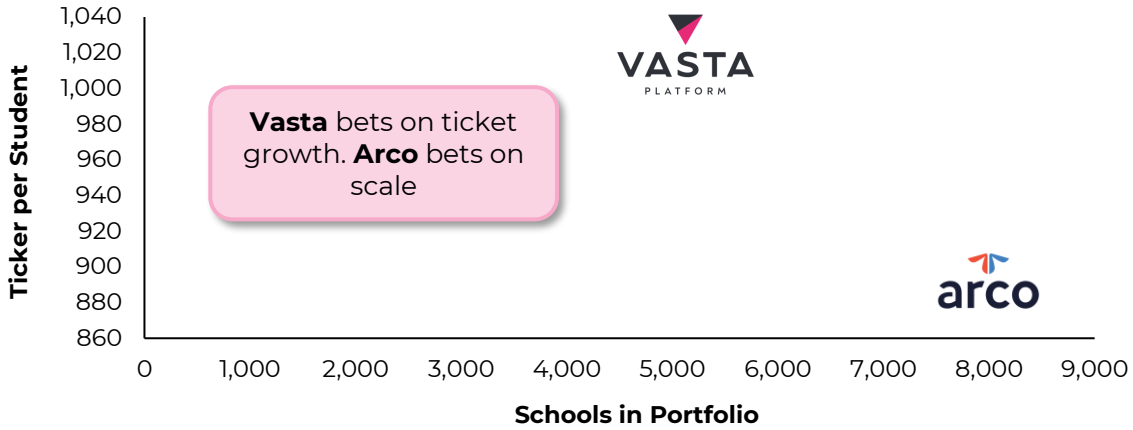

Complements: Add-ons that embed Vasta *deeper* into the school's routine, *raising revenue* per partner over time

Bilingual Solutions: *Premium* offering that grows alongside the school's own ambitions.

School Management: Daily tools that make *switching increasingly costly* over time.

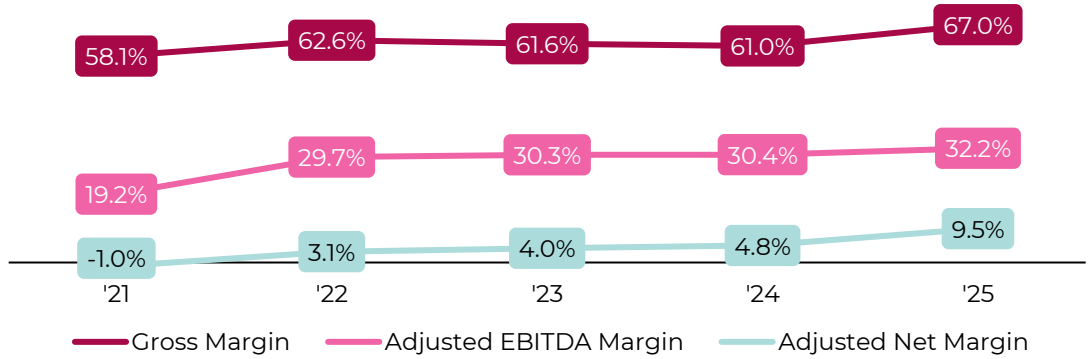

Two players, two strategies

Average ticket per student vs. number of partner schools, '25E

Profitability achieved and expanding

Gross margin, EBITDA margin and net margin over time, '21–'25E

01

Sector Overview

Market Outlook

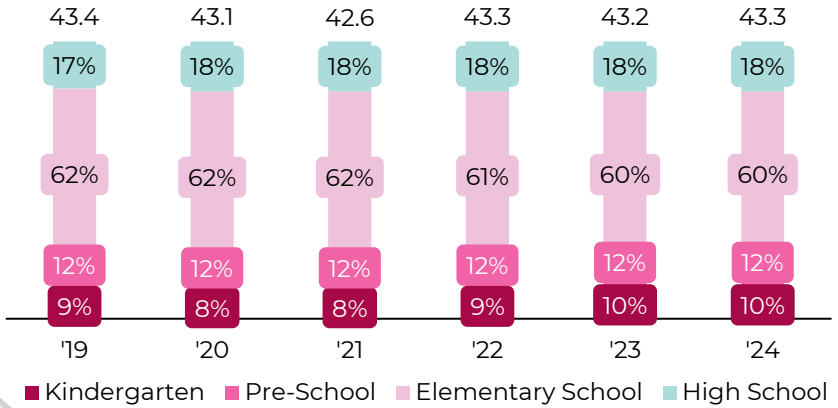

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

Learning Systems Are the Backbone of Brazil's Private K-12

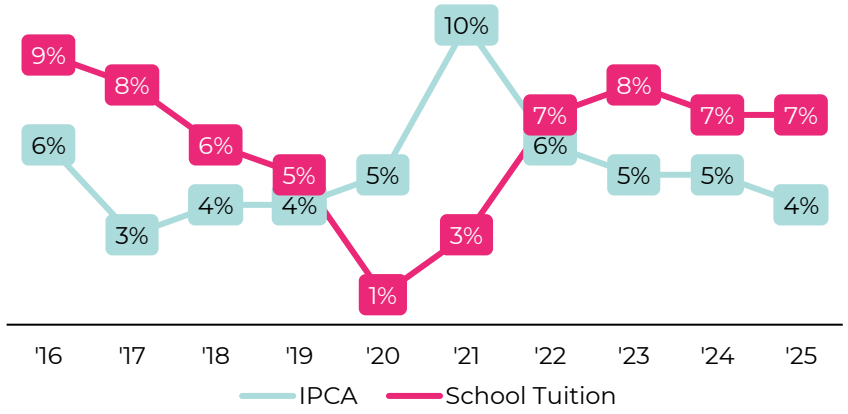

A consolidated model driven by quality competition and schools' limited scale

Students in Brazil K-12 (millions)

CAGR '11-'24 **-0,5%**

Two ways to grow → *1. Higher tuition prices variation*

Schools' tuition has **consistently outpaced inflation**, enabling schools to invest in **quality** and justify **premium pricing**

2025 Private Schools in Brazil per Student Count

Only 10% of total private schools may have the scale to develop their own curriculum and learning system

Teaching Quality is the Main Purchase Driver

"**Exam performance** and **university admissions** remain the **primary reason** schools adopt **consolidated learning systems**"

Eduardo Calbucci
Pedagogical Director, Anglo (Vasta)

School credibility

Parents Trust

Stickiness By Design, Not By Chance

Vasta's portfolio engineering creates structural lock-in and upsell opportunity that Arco fails to replicate

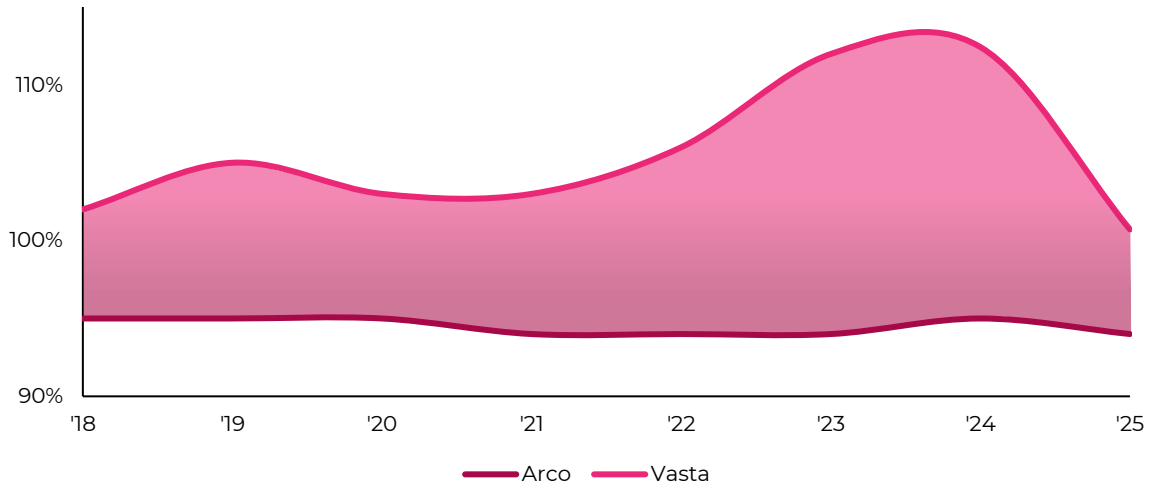

Vasta's engineering has been successful

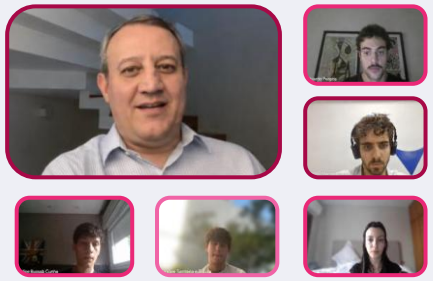

Arco x Vasta – Churn (%)

Not only do schools not go away, but they become more entangled

Arco x Vasta – Net Revenue Retention (%)

> Without a doubt, **implementing the first add-on** is what **deepens my relationship with the system the most**, considering that it affects not only my core business but now **also my management/differentiation**.

Marcelo Menezes – Founder and CEO of Nova Escola Sorocaba

Sources: Companies, News, Team

Deeper Penetration, Better Economics

Vasta's higher margins and reduced growth cost requirements

Growing cross-sell

More products per school over time

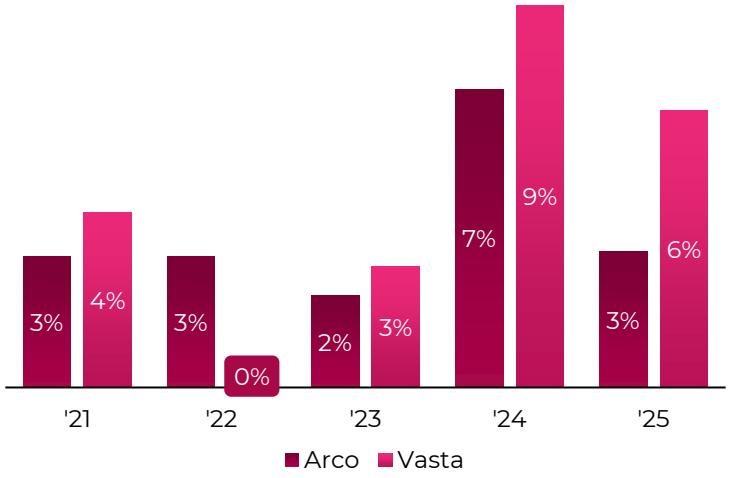

Lower Selling Expenses

Growth consistently comes from existing customer base

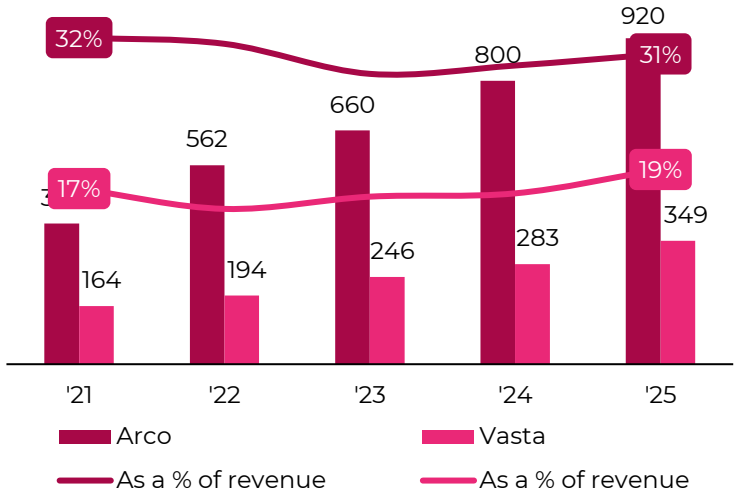

Superior margins

Revenue grows faster than cost due to portfolio synergies

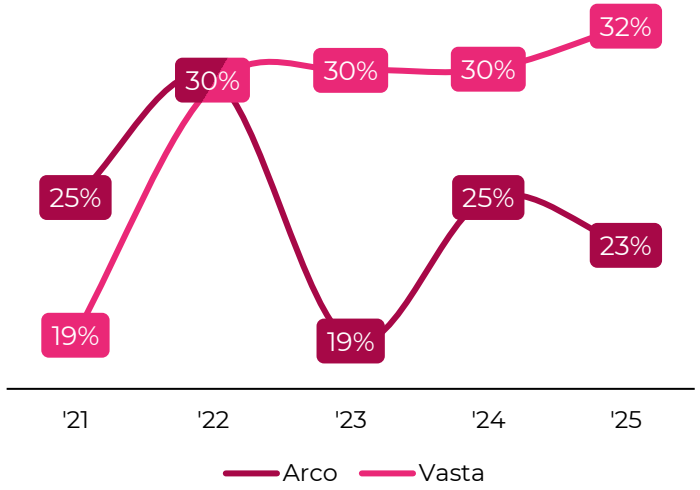

Cross-sell increase per year (%)

Selling Expenses (BRL mm)

EBITDAs Margin (%)

How it drives better unit economics?

1 Portfolio breadth expands wallet share

A broader product suite enables Vasta to monetize existing schools more deeply, increasing revenue

2 Portfolio adoption reduces acquisition needs

As schools adopt additional modules, growth relies less on new logos, lowering CAC

= **Stronger unit economics**

Sources: Companies

Deeper Penetration, Better Economics

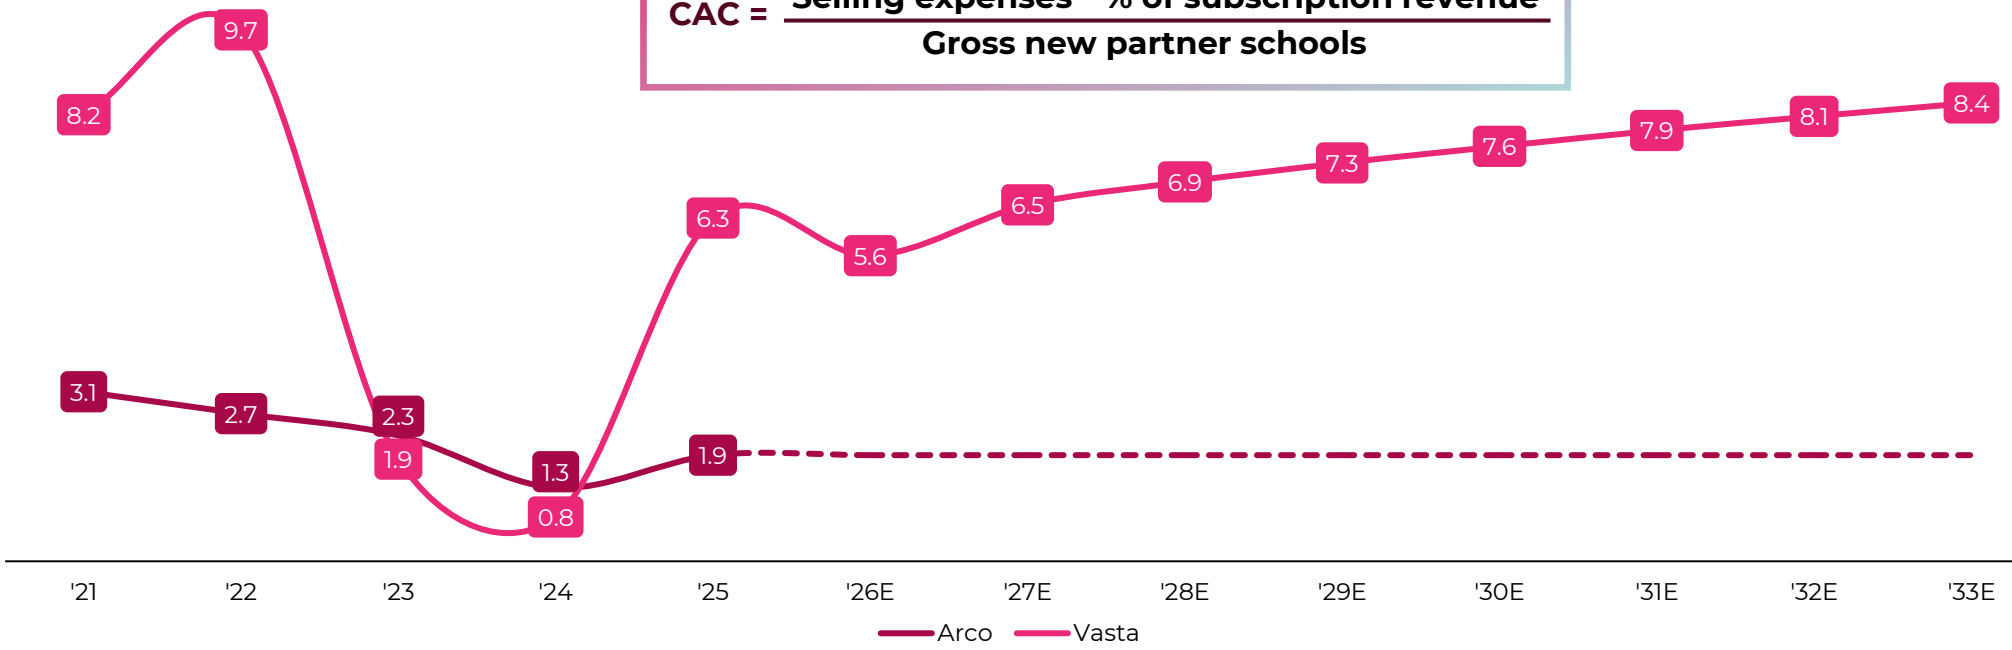

Vasta … cost requirements

And We See This Combination Sustaining Continuous **Superior Returns**

Lifetime Value/Customer Acquisition Cost (LTV/CAC)

$$\text{LTV} = \frac{\text{Gross Margin x ACV}}{\text{Churn x Partner Schools}}$$

$$\text{CAC} = \frac{\text{Selling expenses * \% of subscription revenue}}{\text{Gross new partner schools}}$$

1 … existing schools more deeply, increasing revenue

… on new logos, lowering CAC

Safe And Predictable Business Model

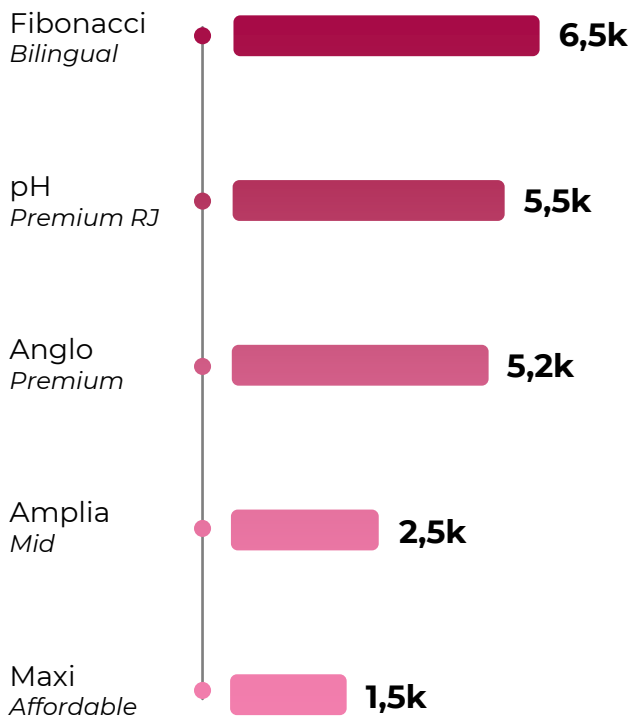

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

Premium Brands, Pricing Power

Brand strength and field data reveal room for price progression

Brand ladder

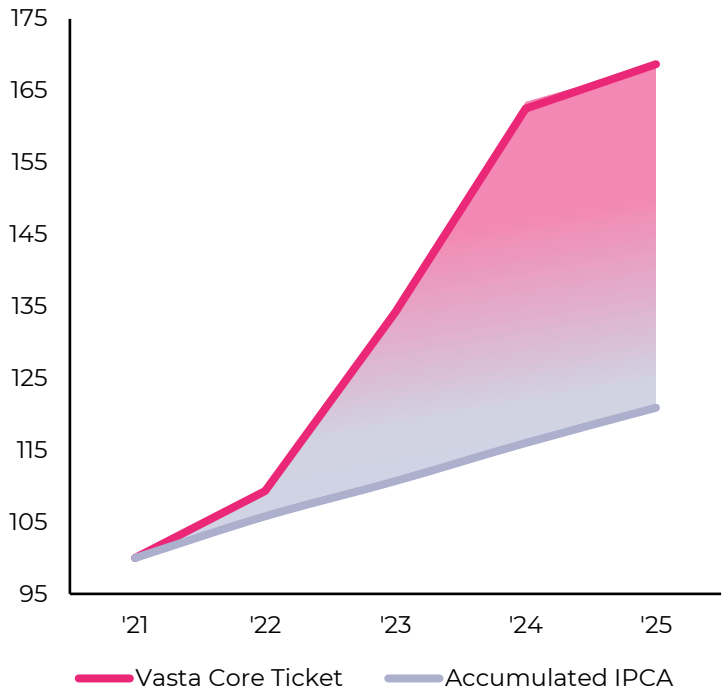

R$/month

Clear **price progression** from affordable to premium.

Pricing Power

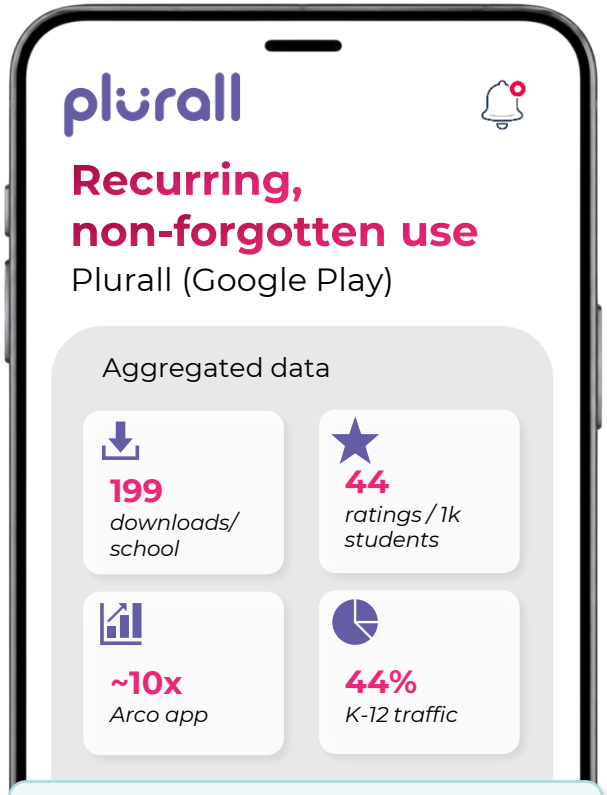

2021=100 (Index)

Ticket **+69%** vs IPCA **+21%**

Field evidence

Proprietary scraping

Product **actually used**, with strong engagement and real presence.

Sources: Company, Google Play

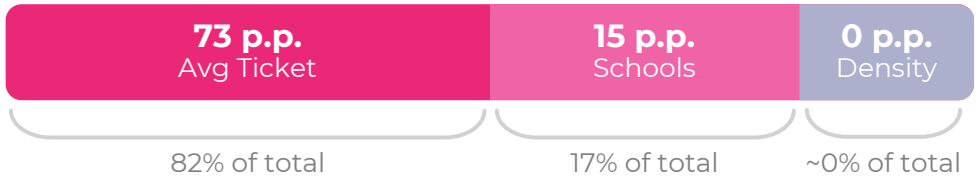

Monetization Is The Growth Engine

Core growth is driven by higher ticket and deeper product penetration, not footprint expansion

Where does core revenue growth come from?

+89% core revenue growth | 2021→2025

Contribution to total growth

How much did each driver actually grow?

Avg Ticket

R$492 → R$830
+69%
2021 | 2025

Schools

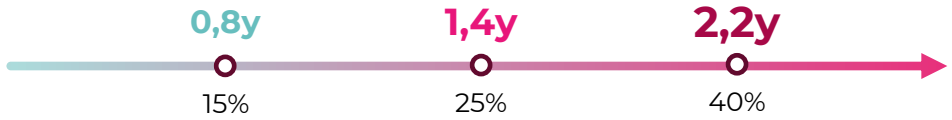

4.508 → 5,025
+11%
2021 | 2025

Density

(students/schools)
296 → 296
0%
2021 | 2025

Vasta grows by **monetizing the installed base**, not by expanding footprint or densifying students per school.

CAC payback · years by allocation

% of commercial spend allocated to new logos

Robust: pays off in ≤2,2 years even in the worst case

Value by depth · NPV/school

School with 3+ products is worth **1,8x** the core-only value

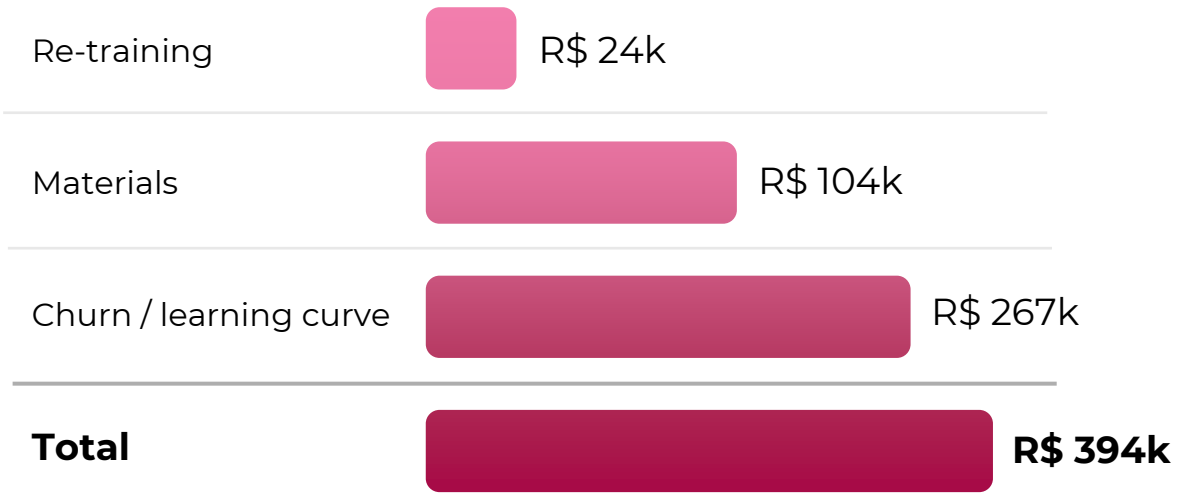

Source: Company

Sticky Base, Resilient Returns

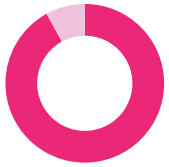

High switching costs and strong retention protect value even under severe stress

Switching cost

R$ thousand per school

High retention, low risk

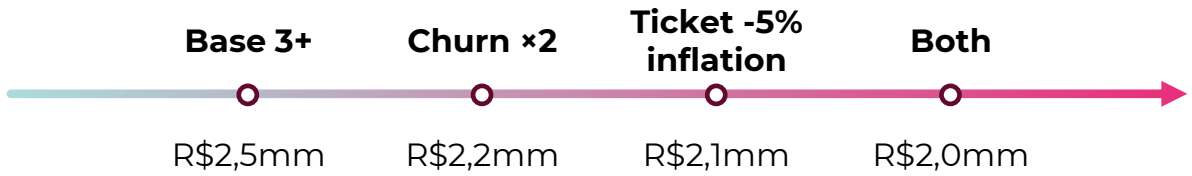

92,8% GRR

~2,8% real churn

<0,04% largest client

Stress resilience

NPV school 3+ (R$ mm)

~R$394k ≈ 1,3x the system's annual fee

Switching costs more than a full year of contract value — the moat that locks in the school.

Resilient even under severe stress: with churn ×2 and ticket 5% below inflation, still above the core-only base case (R$1,4mm).

Sticky base + diversified revenue = **durable, low-risk composition**

Source: Company

03

VCP I

Northeast Expansion

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

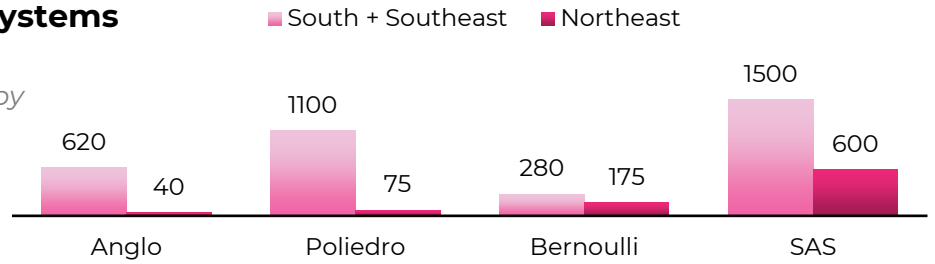

Why Northeast, Why Now

Low premium penetration, close tickets and limited competition create a clear whitespace opportunity

01

Scarce premium systems in the Northeast

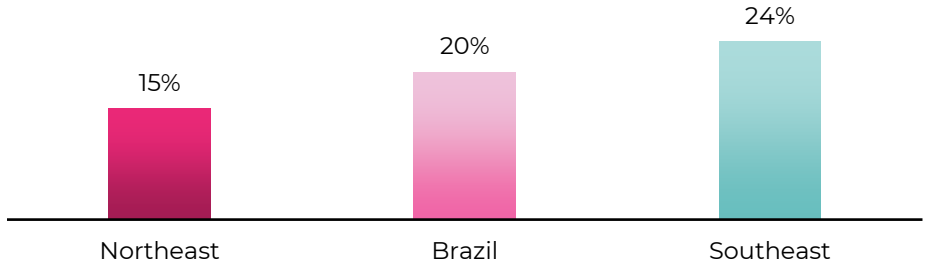

no. of partner schools by system

02

Private underpenetration

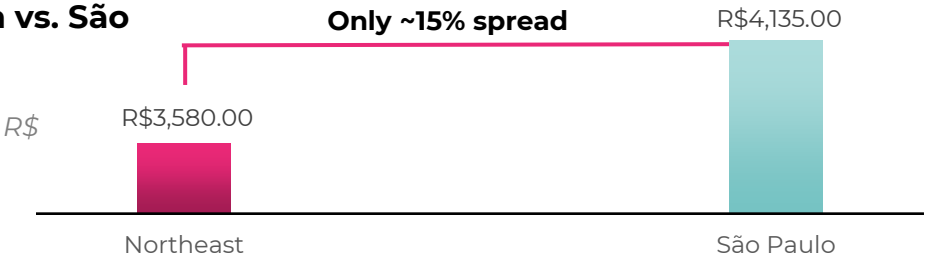

% of enrollments in private schools

03

Ticket headroom vs. São Paulo

monthly Anglo's premium course fee, R$

Northeast = Whitespace Premium

Underpenetrated → headroom

Low private penetration + limited premium presence. Anglo has only ~40 schools in the NE

Income + performance

NE leads ENEM rankings; A/B families pay a large premium from average for top performance. Ticket ~15% below SP

Window is closing

Consolidation + switching costs favor the first mover

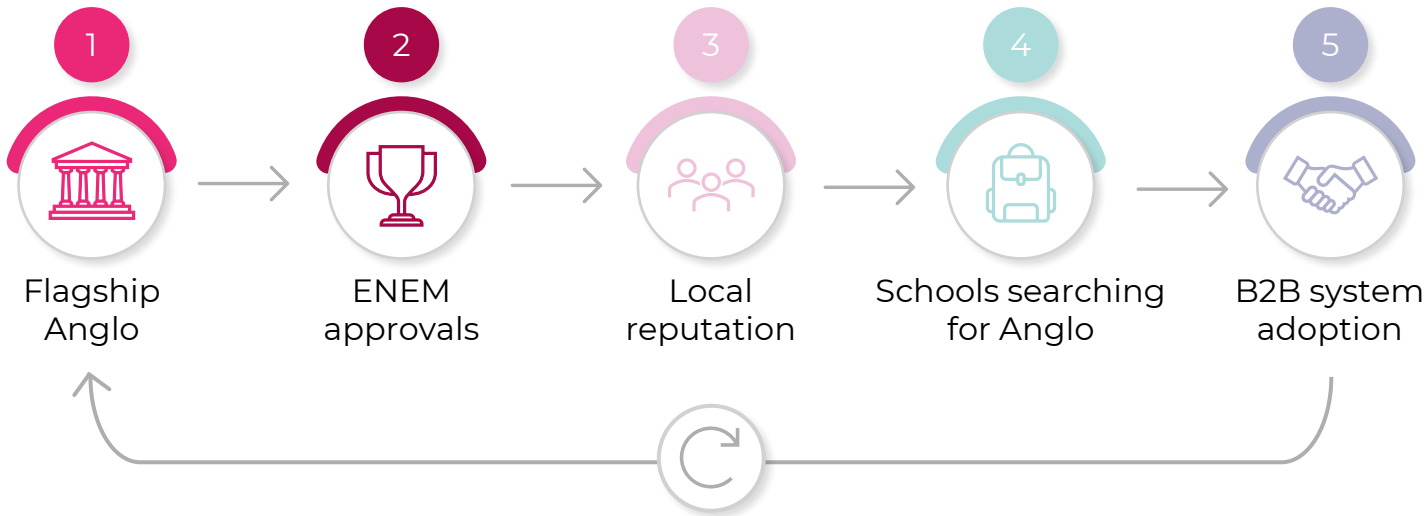

Premiumization → Volume

Sources: INEP, IBGE, ENEM

The Flagship Flywheel

One anchor school can turn reputation into approvals, and approvals into broader B2B adoption

The self-reinforcing cycle

1 B2C flagship can unlock dozens of B2B schools

A single flagship creates spillovers (admissions → reputation) that pull dozens of schools into the system.

One-off CAPEX, network-multiplied return

Bernoulli - with flagship

Bernoulli **entered Salvador in 2016** and built around **150 partner schools** in Bahia over the following decade. Today, it has one of Brazil's top ENEM schools

Poliedro - without flagship

Poliedro expanded through a **B2B-only strategy**, reaching more than **70 partner schools** in the Northeast in six years and building presence across 9 states

Anglo - already ahead

Anglo starts from a stronger base, with 4 Anglo Líder units already in Recife, around **40 partner schools in the region**, and Cogna's scale behind the rollout

Sources: Companies, Sistema Poliedro

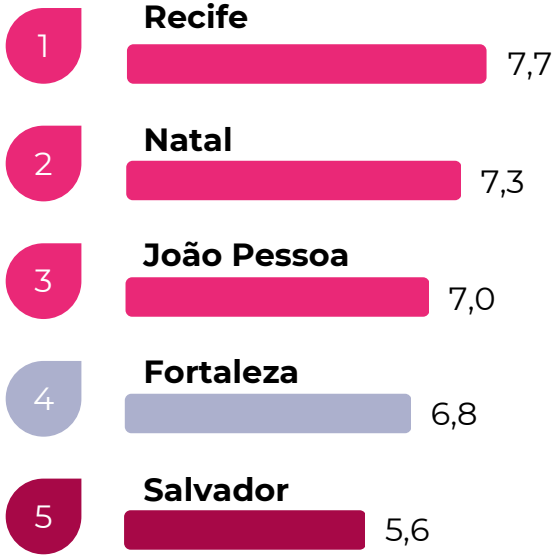

Start Where the Odds Are Best

Recife ranks highest on entry attractiveness, with pilot-ready adjacencies and a clear phased rollout path

Capital attractiveness ranking

composite score 0–10

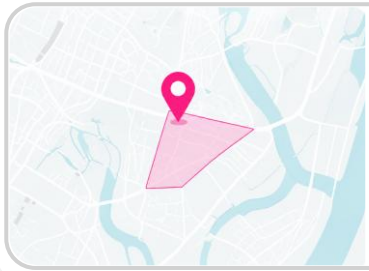

In thousands

City	Score	GDP pc	B2B Base	Incumbent
Recife	7,7	44,6	270	No
Natal	7,3	41,4	145	No
J. Pessoa	7,0	34,8	145	No
Fortaleza	6,8	37,4	350	Yes
Salvador	5,6	31,7	530	Yes

Recife has the best entry case: stronger ticket/GDP, while **Salvador** is bigger but tougher and **João Pessoa/Natal** fit low-CAPEX pilots.

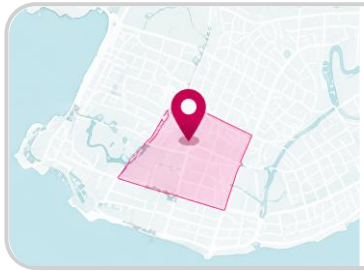

Target neighborhoods (*Geoanalytics*)

Recife

VCP II

Educbank Acquisition

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

A Diamond in the Rough

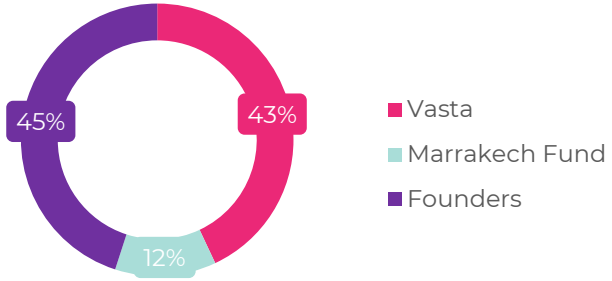

Educbank at a Glance

educbank

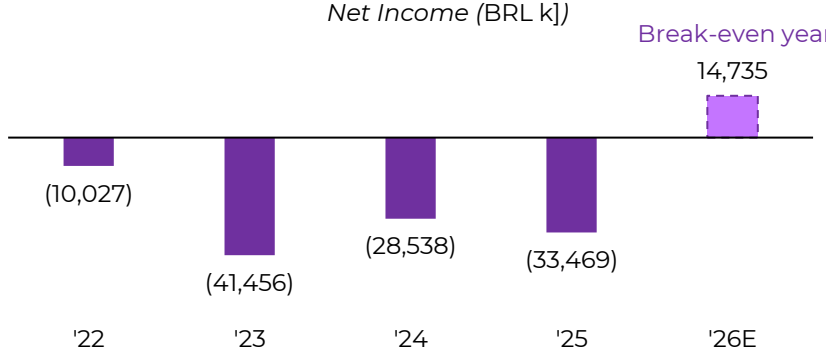

Educbank Summary

Educbank is a Brazilian B2B fintech that operates the full financial cycle of private K-12 schools. Its core product is **receivables anticipation**: the school transfers the credit rights of its monthly tuition fees to Educbank, which pays the school 100% of the expected monthly revenue upfront at the beginning of the month and assumes full default risk from families

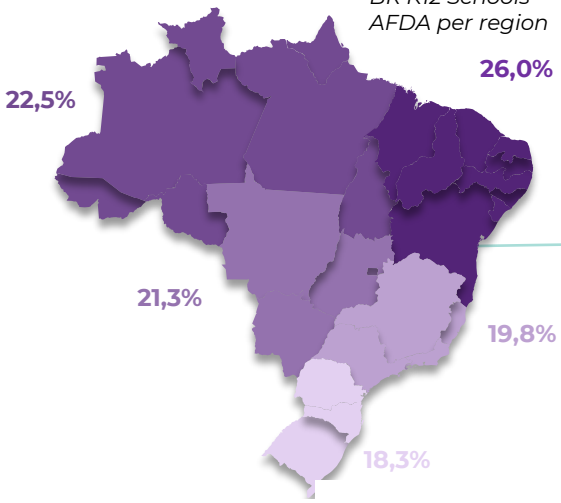

Cap Table

Net Income (BRL k])

BR K12 Schools AFDA per region

The Isaac Playbook

How Arco's full acquisition of Isaac validates Vasta's opportunity with Educbank

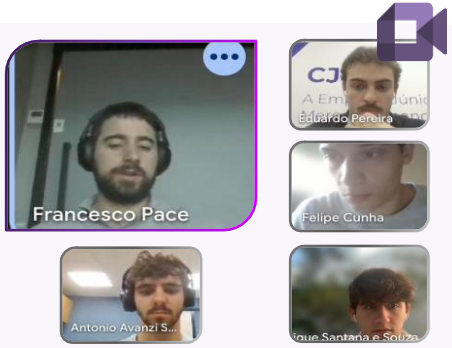

arco 2020 → isaac

With an initial investment from Isaac's Seed 3 fund, **Arco quickly recognized its potential** and fully incorporated it:

2022: Arco's Full **Acquisition** = **Turning Isaac into one of core business**

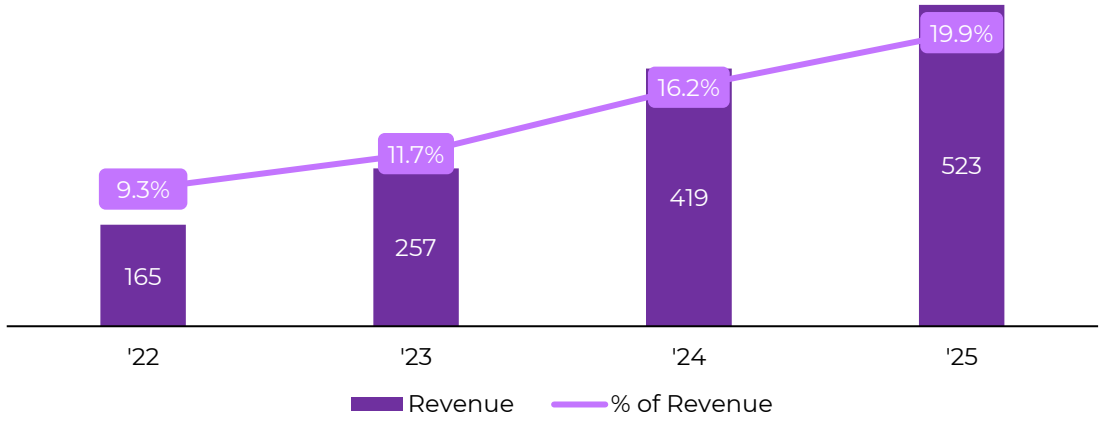

> **Everything is in Vasta's hands** for Educbank to be on par with Isaac; what's lacking is **integration** and, most importantly, more **direction**, things that certainly **would naturally come with a full acquisition.**

Francesco Pace – Educbank FP&A Director

And the result is crystal clear: a significant growth driver

Isaac's revenue and share of Arco's total since full acquisition

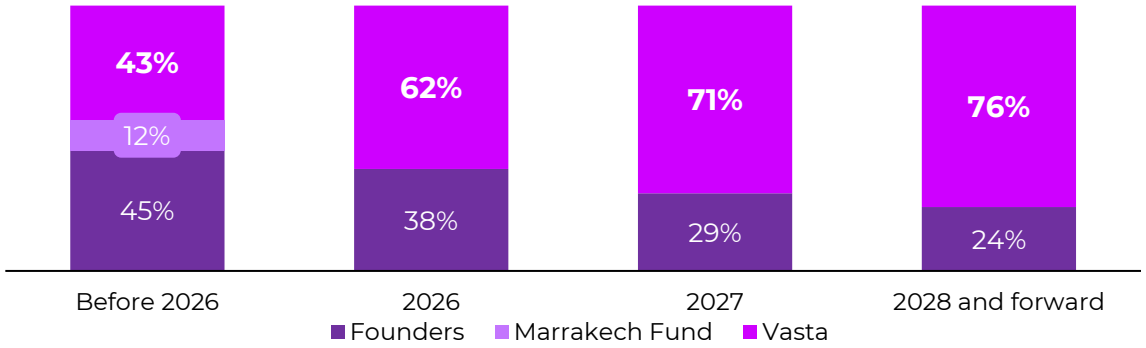

Sources: Company, Team

Our Plans For The Future

How are we planning our entry and development of Educbank

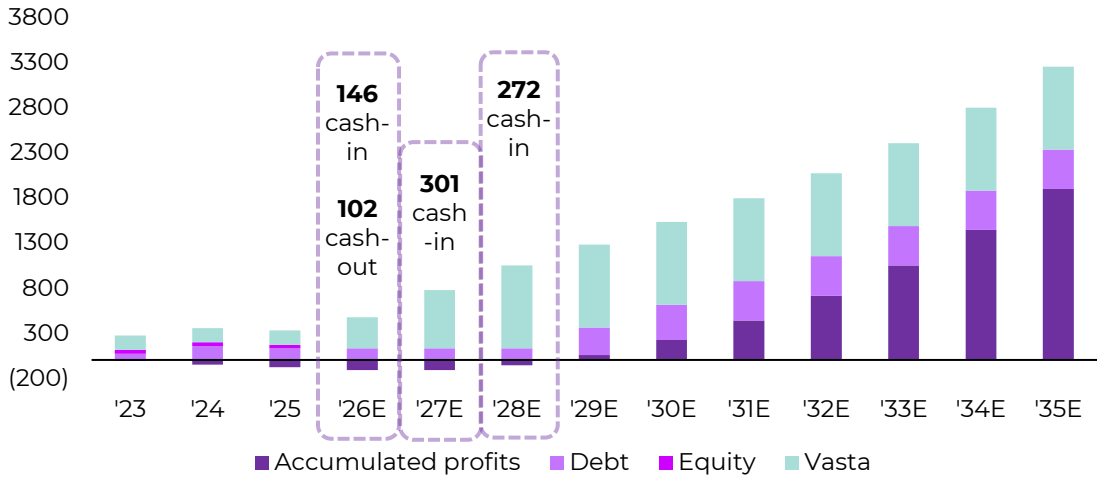

A gradual entrance done with Marrakech cash-out and gradual cash-ins

Cap table changes (%)

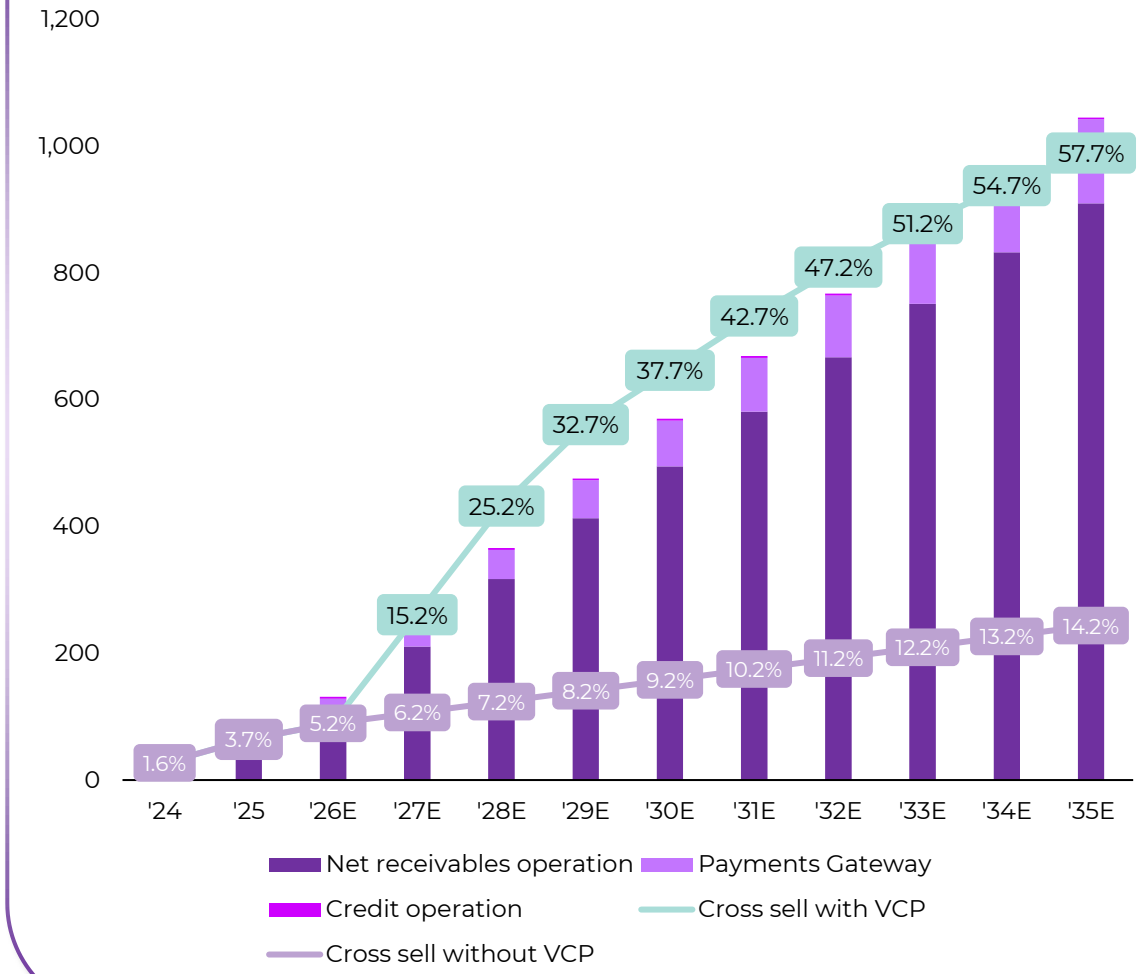

Capital Structure over time

Total invested capital (BRL mm)

Focus on growth inside an already owned market

04

Valuation

How Everything Translates Into Numbers

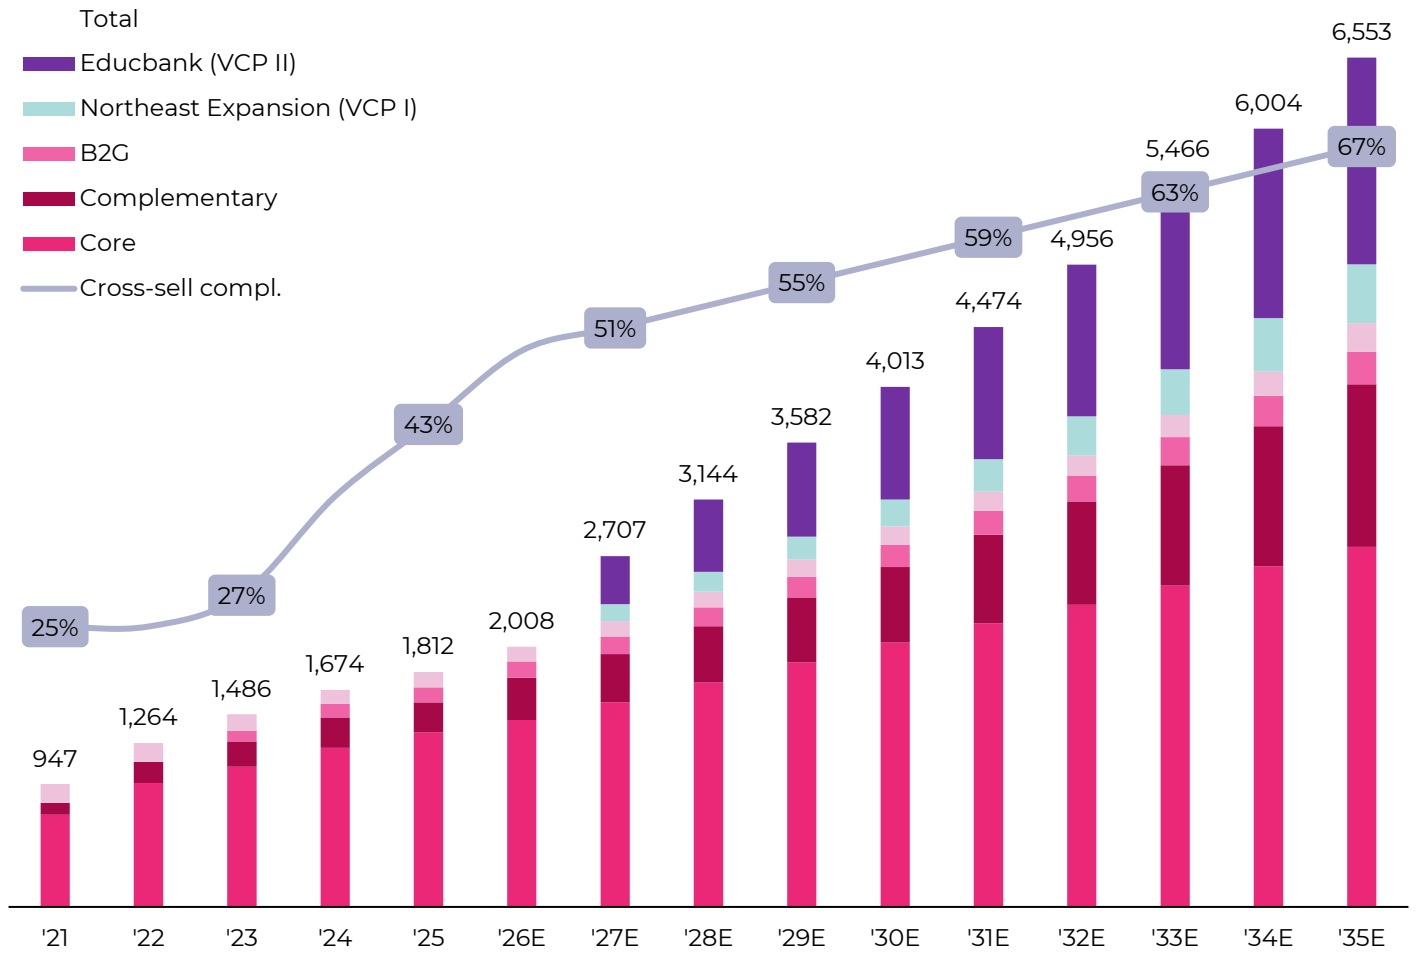

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

Key Numbers in our Model

We expect an increasing revenue, driven by core growth and cross-sell increase

Revenue Breakdown plus cross sell

Revenue per segment (BRL k) x Complementary and core cross-sell (%)

Sources: Company, Team

Main Assumptions

I. Revenue

Broken by type, assuming new partner schools, increasing cross-sell and ticket growth converging to inflation

II. COGS & SG&A

Segmented by type, margin expansion due to fixed costs dilution and usage of low-cost brands (subscription)

III. Debt

Existing debt is amortized per schedule

IV. Churn

Moderate reduction over time, with a higher decrease rate with VCP II, due to elevated switching costs

V. Intangibles, PP&E & ROU

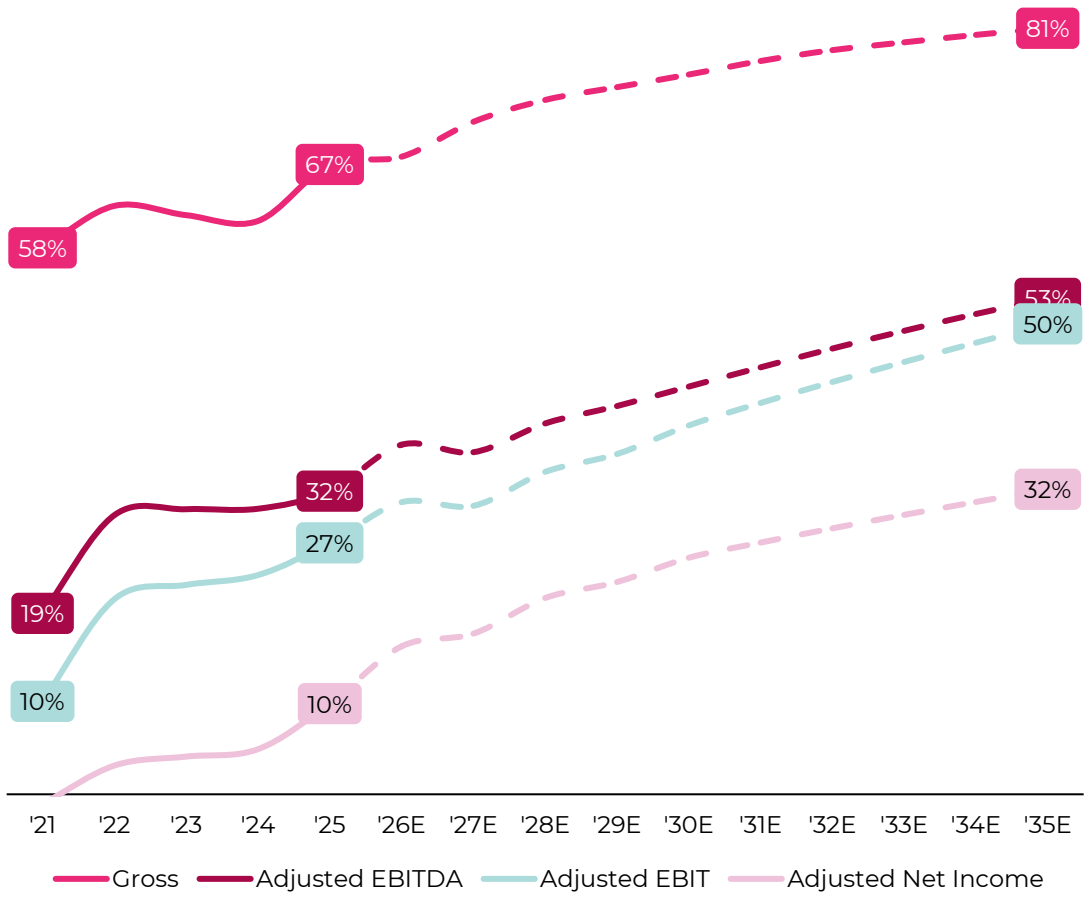

Stabilized intangibles and PP&E, with maintence only and amortization of acquisition based non-current assets

Key Numbers in our Model

Vasta also shows an improving margins and leverage ratios

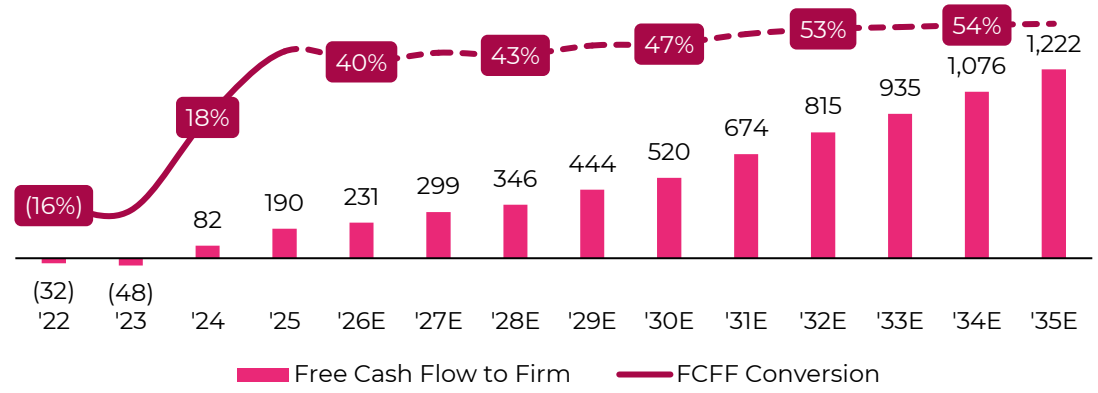

We see constantly improving margins for the future

Gross, Adjusted EBITDA, EBIT and Net Margins (%)

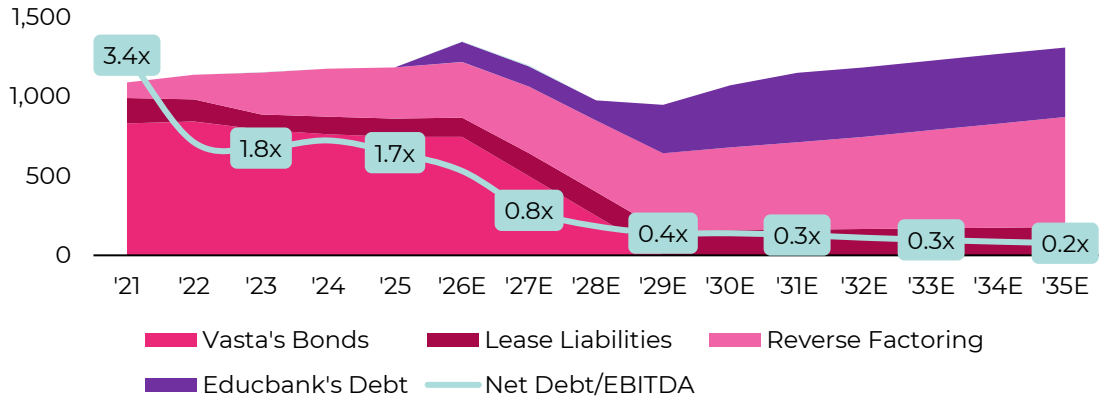

With a good long-term Free Cash Flow generation...

Free Cash Flow to Firm[1] (BRL mm) x FCFF Conversion (%) – without VCPs

...Vasta maintains a stable leverage due to high cash generation

Debt breakdown (BRL mm) x Net Debt[2]/EBITDA (x) – post-IFRS 16

Sources: Company, Team

(1)NOPAT – ΔNOWC – CapEx + D&A (excl. acquisition intangibles)

(2) Cash and Marketable Securities were subtracted from Gross Debt to arrive at Net Debt

05

Deal Process

How is the entry and exit structured

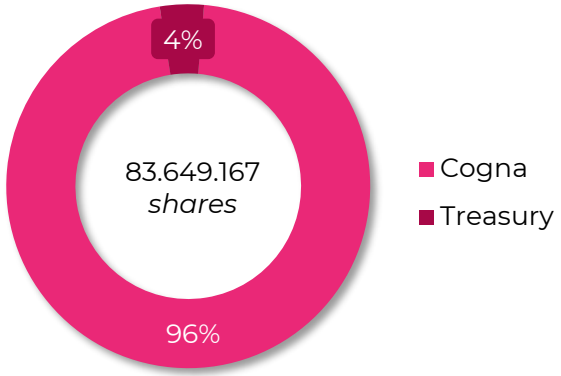

01 Overview | 02 Thesis | 03 VCP | 04 Valuation | 05 Deal | 06 Risks

What Have We Planned For The Deal Terms

Gradual cash-in operation, that boosts company's venture operations

Current Shareholder Structure

Current Cap-Table

CJE's Entry

+ BRL 876 mm

Primary capital injection

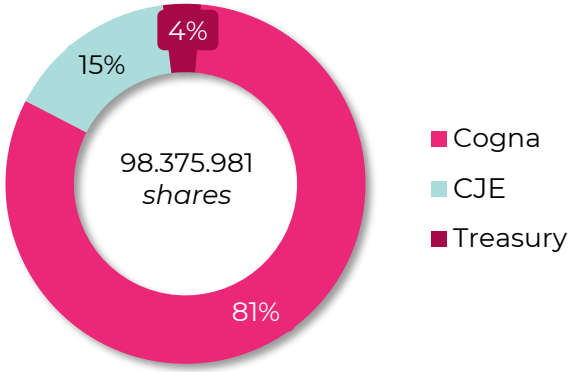

14.726.814

new shares issued to CJE

Post-Deal Shareholder Structure

Post-Money Cap-Table

Why Primary Capital Injection?

Risk Shift

NE expansion and Educbank are capital-heavy bets - primary cash funds them, Cogna keeps control and 85% of the upside

Cogna's Cash Cycle

Cogna is delevering; fresh debt would reverse that - primary equity sidesteps it and let them focus on their other brands and companies

Entry Multiple

Trading Comps **5,2x**	***Transaction Comps*** **9,1x**

Deal Structure: In Legal Terms

Essential pieces for our successful entry

Shareholders' Agreement

Vasta's total share by type

According to Vasta's Bylaws

*Board members are **in proportion to ownership,** excluding independent seats (3).*

*After the OPA, **without the SEC regulation** that mandated three independent seats, **we included a clause to secure one of those seats***

1 of 7

Antônio Soban | *Eduardo Pereira* | *Felipe Cunha* | *Henrique Santana* | *Sofia Torneri*

Term Sheet

I. Board Seat (15%)

The Investor appoints one board member with veto rights over budget approval, key hires, related-party transactions, new debt, and share issuances, the exact channels through which a controlling shareholder typically extracts value from a minority.

II. Tag Along

Any transfer of Cogna's stake to a third party grants the Investor the right to exit at identical price and terms.

III. Liquidation Preference

In any liquidity event, the Investor receives its invested capital corrected by accumulated CDI before any distribution to other shareholders, ensuring the preference remains economically real, not merely nominal, in a high-rate environment.

IV. Anti-dilution

This clause grants the minority investor a board seat with veto rights over key decisions (budget, hires, related-party deals, debt, share issuances), protecting against value extraction by the controlling shareholder

V. Dividend Sweep

Any cash balance exceeding 15% of net revenue must be distributed to shareholders within 90 days of year-end, preventing Cogna from retaining surplus capital within the structure at the minority's expense.

VI. Put Option (from 2031)

The Investor may sell its entire stake to Cogna between 2031–2032 at the entry multiple applied over LTM EBITDA at exercise date, with a 20% discount. A rational tradeoff: guaranteed exit certainty in exchange for a modest price concession.

VII. 2026 Valuation Lock-in

The investor is proposing a gradual investment, distributed among the first 3 years of operation (2026, 2027 & 2028). To prevent dilution, the valuation of such investments is fixed at the equity value determined in the first cash-in.

Sources: Team, Company

Cash Flow & Returns
