Antonio Sajioro | Gabriel Viana | Thiago Nogueira

Partners: GIC I Lightrock I Valor Capital Group

Presentation Index

I. Sector Overview

II. Company Overview

III. Investment Thesis

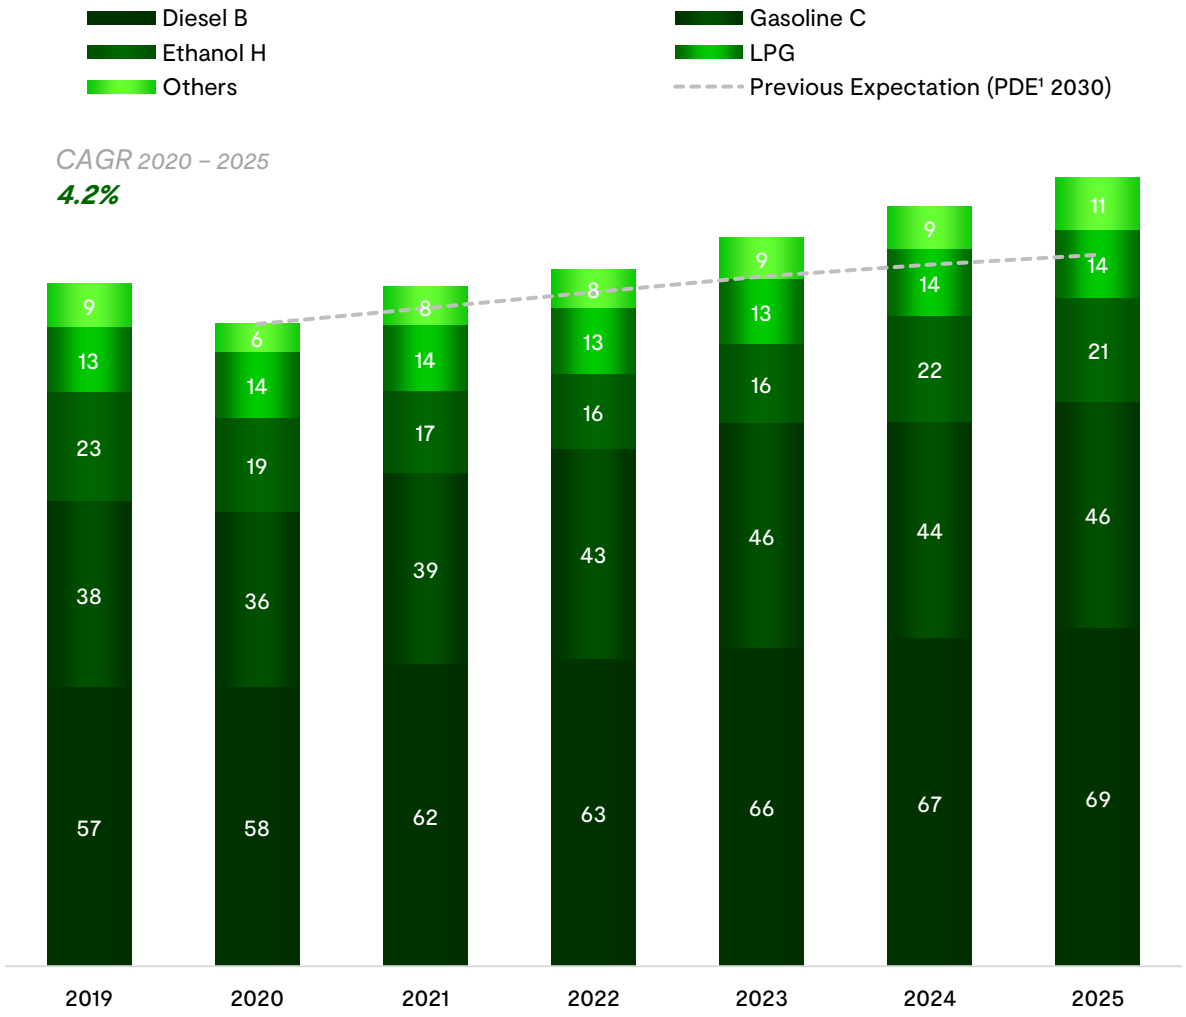

IV. Structure & Returns

Brazilian Fuel Demand Growth

Freight-heavy logistics keep diesel demand structurally high while electrification penetration is already projected to be lower than expected

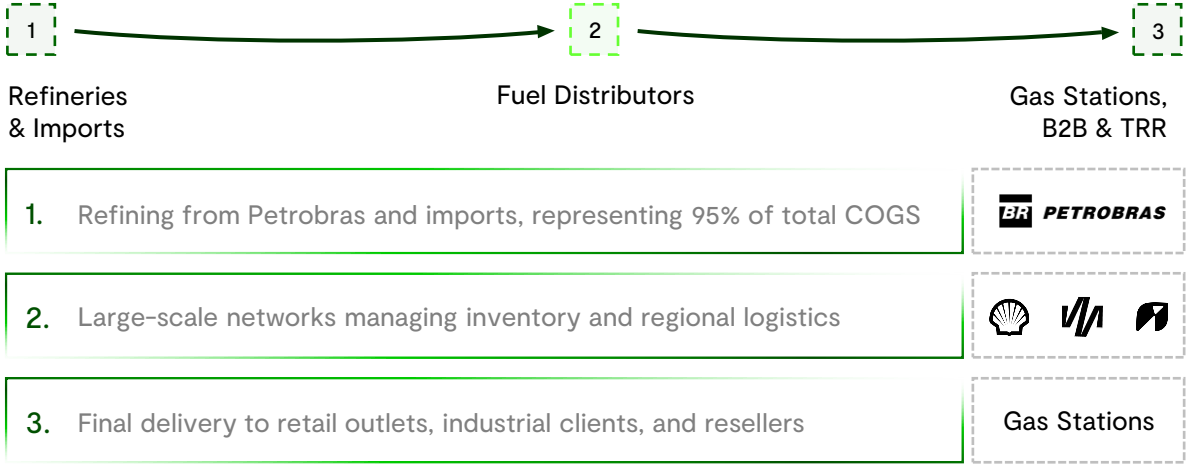

Brazil Fuel Sales by Product [mn m³]

Consumption is concentrated in diesel, gasoline and ethanol, growing with economic activity

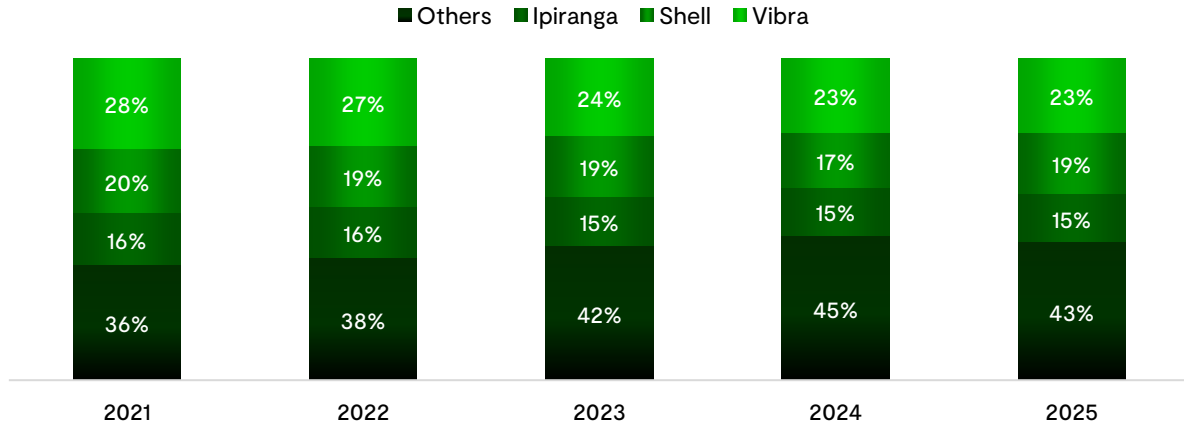

The Fuel Supply Chain Architecture

Fuel distribution acts as the link between refining, imports and final fuel consumption

Fuel Distributors Market Share [%]

The brazilian fuel distribution market operates as an oligopoly with a few dominant players

Sources: ANP, ONS

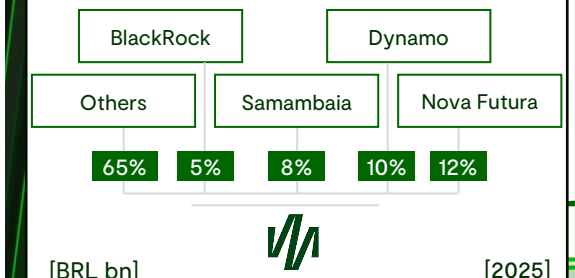

Notes: (1) "*Plano Decemal de Expansão de Energia*"

Vibra, At a Glance

Vibra is Brazil's leading fuel distributor, with a resilient business model anchored in its core fuel distribution network

Vibra Energia, founded in 1971 as Petrobras Distribuidora (BR), is one of Brazil's leading fuel distribution companies and was privatized in 2021, becoming independent. It operates in fuel distribution, aviation fuel, lubricants, and energy solutions, serving retail, commercial, and industrial clients across Brazil, where it generates most of its revenue

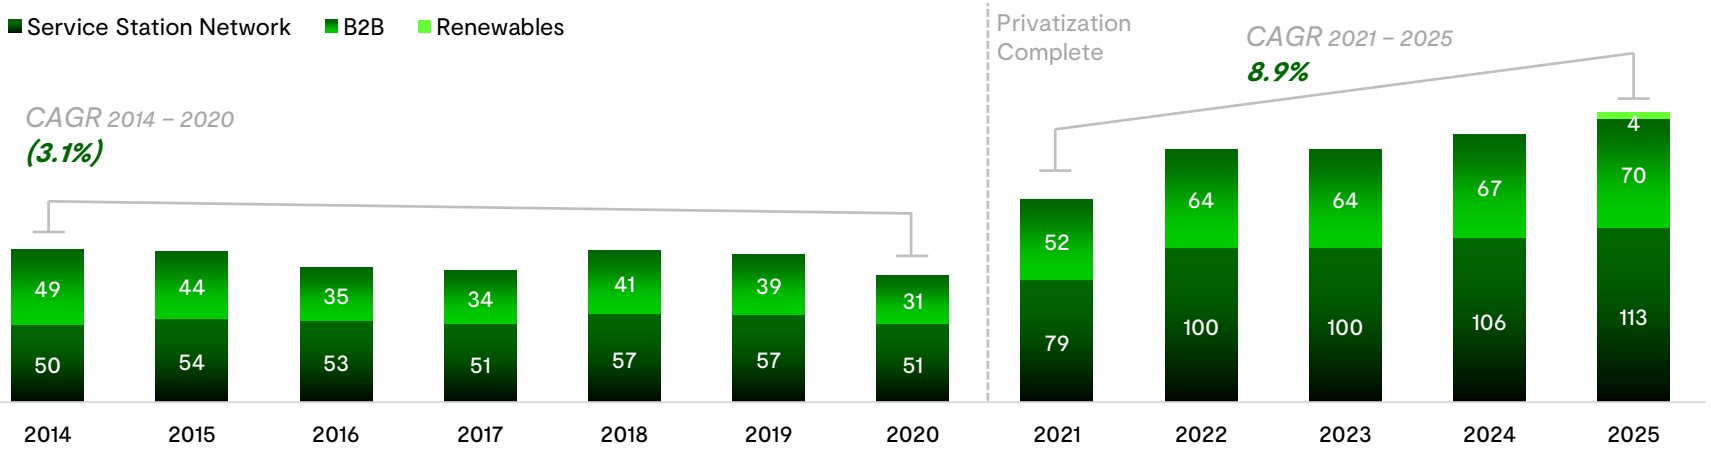

Shareholder Structure

[BRL bn]	[2025]
Market Cap	39.4
ROIC	13.0%
Net Debt/EBITDA	3.2x
P/E Forward 1y	15.1x
EV/EBITDA Forward 1y	6.9x

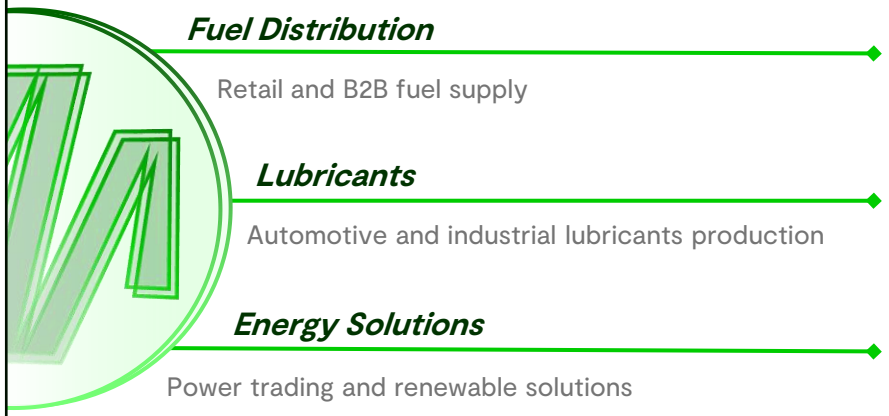

Vibra's Net Revenue per Segment [BRL mn]

Following its full privatization, Vibra's net revenue resumed growth, delivering a solid CAGR in recent years

Vibra's Segments

Fuel distribution supported by lubricants and energy solutions

Fuel Distribution

Retail and B2B fuel supply

Lubricants

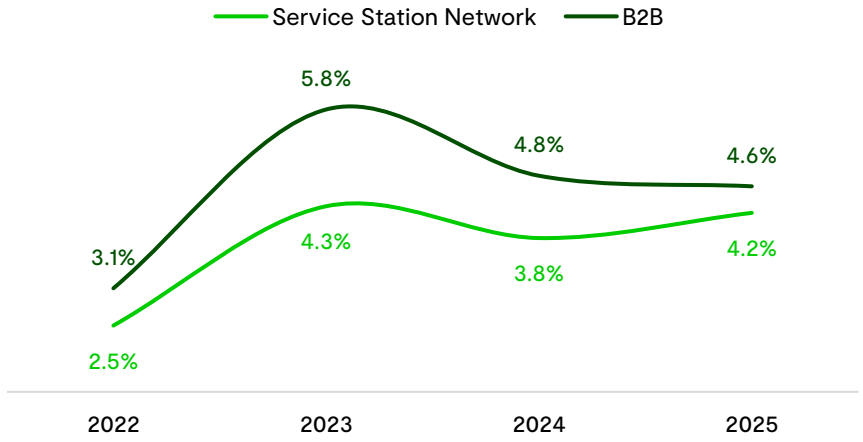

Automotive and industrial lubricants production

Energy Solutions

Power trading and renewable solutions

EBITDA Margins per Segment [%]

Higher margins driven by industrial and value-added products

Sources: Capital IQ, Vibra

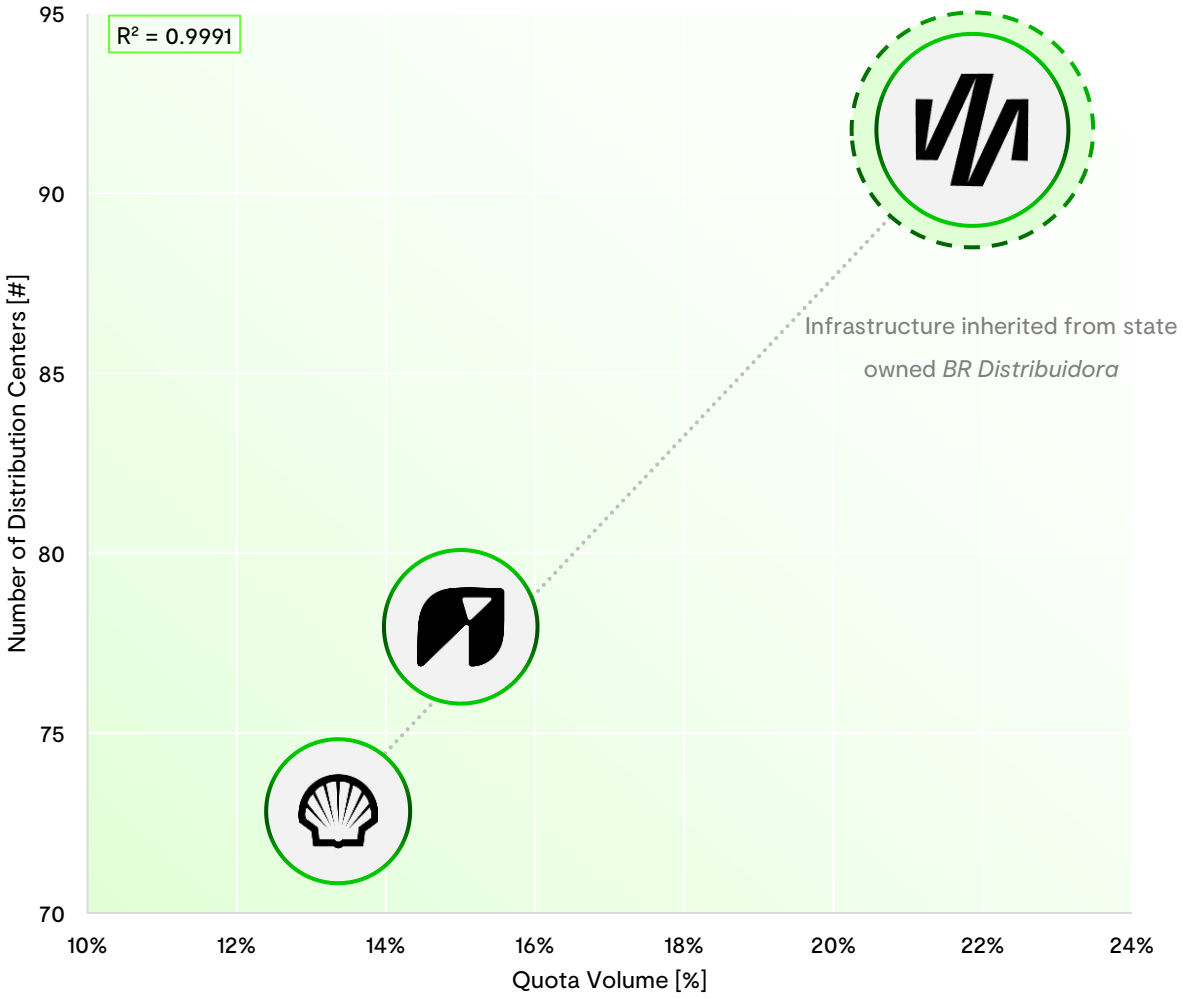

Notes:

Logistics Leadership with Declining Returns

Vibra's logistics scale and profitability creates an advantage, though returns weakened amid a shift from its core business

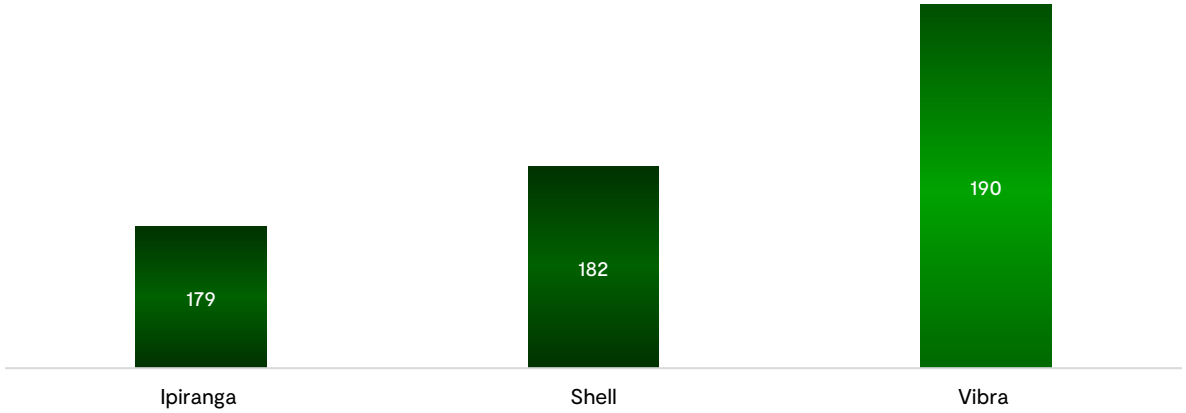

Petrobras Supply Share vs Logistics Infrastructure [#, %]

Vibra's larger infrastructure and Petrobras supply access create a structural advantage

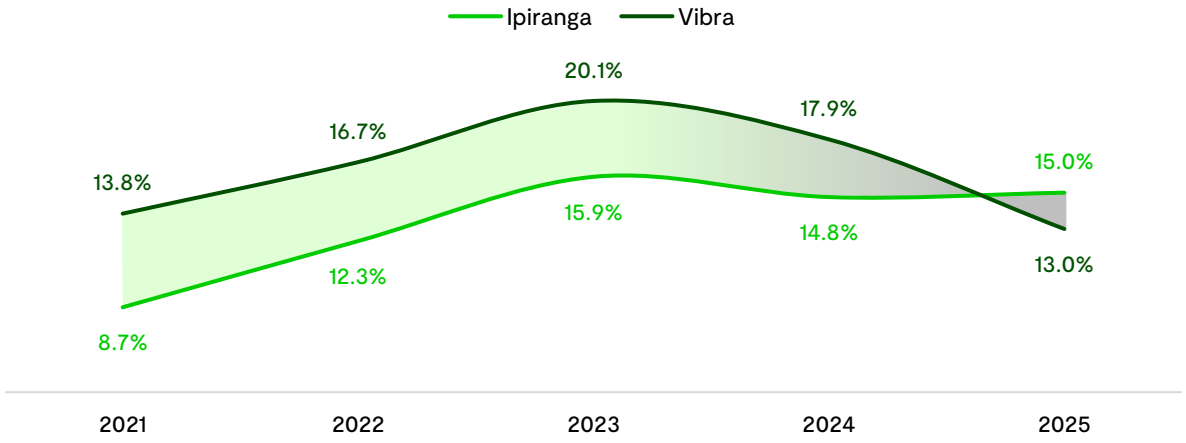

Comparable[1] Profitability in the "Big 3" [EBITDA/m³]

This structural scale advantage translates into higher profitability among peers

ROIC Performance Comparison [%]

A shift away from Vibra's core business contributed to declining ROIC and loss of leadership

Sources: Raízen, Ultrapar, Vibra

Notes: (1) 2025 Data

Strategic Missteps Under Leadership Instability

VIBRA

Frequent leadership changes led to inconsistent strategies and several non-core investments, including the overpriced Comerc acquisition

Share Price Performance Through Strategic Decisions [BRL]

Several poor capital allocations, especially the overpriced Comerc acquisition by prior management, distracted the company from Vibra's core business

2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026

Investment Thesis

I

Divestiture of Comerc

A two-step structured spin-off aiming to maximize value in the divesture, to pave the way to re-rating of Vibra's multiples, deleverage the holding and other value creation opportunities

II

Moove Acquisition to Build a Lubricants Champion

PE-backed acquisition of Moove to help Vibra complete a long-desired strategic move, followed by a spin-off of international assets to focus on Brazil and create a national lubricants champion with Lubrax

III

Unlocking Credit to Capture Market Share

After "Carbono Oculto" tightened credit, Vibra can use retailer data to restore financing access to branded stations and capture share from credit-constrained white-flag players

InFinance
Organização Estudantil de Finanças | Insper

Investment Thesis

I

Divestiture of Comerc

A two-step structured spin-off aiming to maximize value in the divesture, to pave the way to re-rating of Vibra's multiples, deleverage the holding and other value creation opportunities

II

Moove Acquisition to Build a Lubricants Champion

PE-backed acquisition of Moove to help Vibra complete a long-desired strategic move, followed by a spin-off of international assets to focus on Brazil and create a national lubricants champion with Lubrax

III

Unlocking Credit to Capture Market Share

After "Carbono Oculto" tightened credit, Vibra can use retailer data to restore financing access to branded stations and capture share from credit-constrained white-flag players

Comerc, At a Glance

A diversified energy platform with strong capabilities in trading, renewable generation, and integrated solutions

comerc energia

Comerc Energia, founded in 2001, is a Brazilian company focused on energy trading, solar and eolic generation, and integrated energy management solutions. It serves corporate and industrial clients across Brazil and, since 2021, is part of the Vibra Energia group. The company operates primarily in Brazil, delivering cost optimization and sustainability solutions

Transaction Details

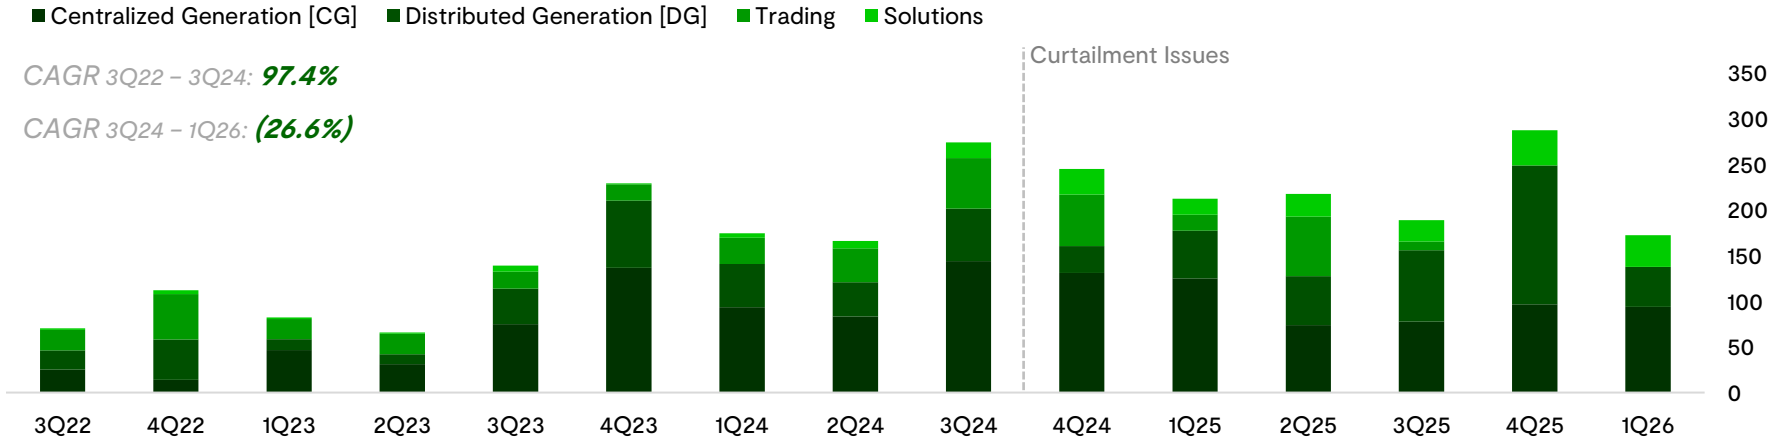

50%	50%
Phase 1: Oct 2021 Value: BRL 3.25 bn	**Phase 2: Jan 2025** Value: BRL 3.73 bn

The deal expands Vibra into energy trading and renewables

[BRL bn]	[2025]
Enterprise Value	9.8
EBITDA	0.6
Net Debt/EBITDA	6.2x
EV/EBIT Forward	16.6x
EV/EBITDA Forward	11.7x

Comerc's EBITDA per Segment [BRL mn]

Revenue performance has been increasingly affected by curtailment issues, particularly impacting its centralized generation portfolio

Comerc's Segments

Three complementary segments forming Comerc

Energy Trading

Electricity commercialization in the free market

Centralized Generation

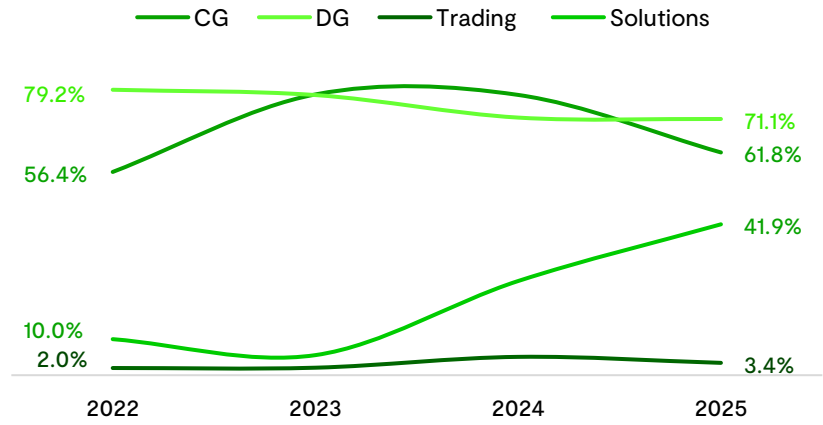

Utility-scale renewable energy assets

Distributed Generation

Shared generation for retail consumers

EBITDA Margin per Segment [%]

Generation segments deliver Comerc's highest EBITDA margins

Sources: Comerc, Vibra

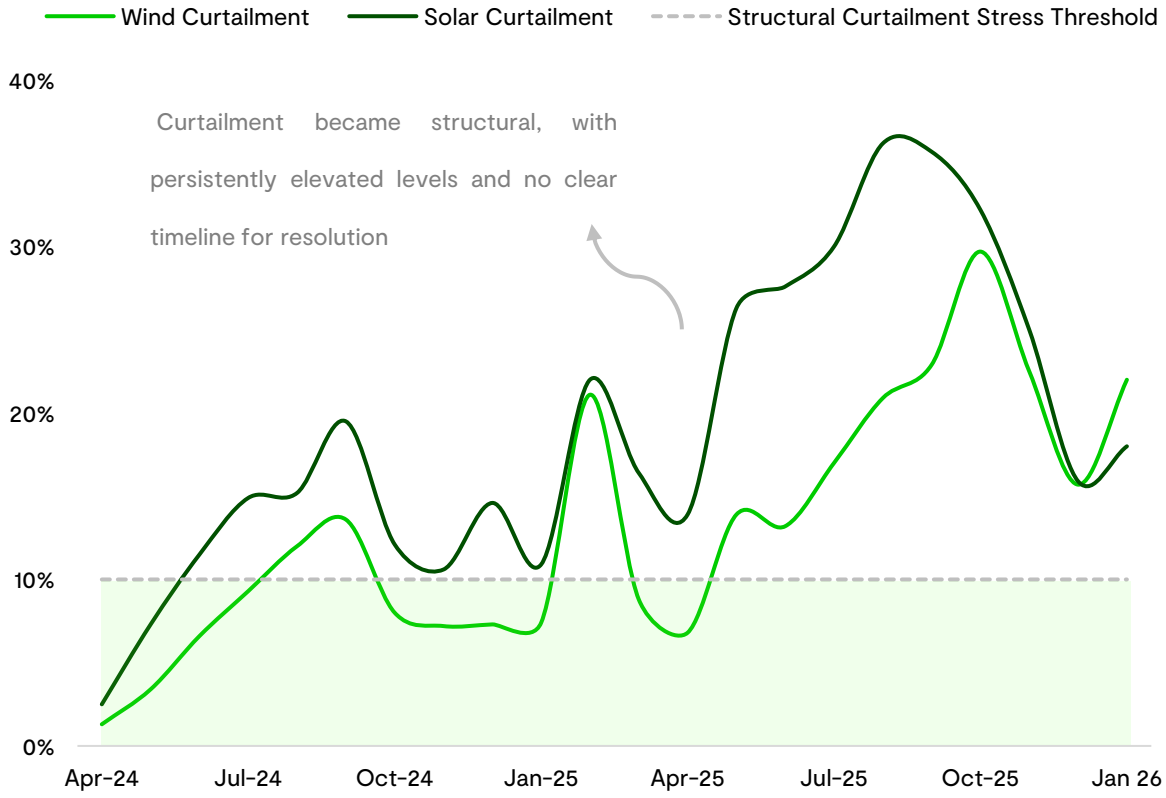

Notes:

Comerc Underperforming Expectations

Curtailment pressures and weak operational performance have constrained EBITDA generation while increasing leverage at Vibra

Solar and Wind Curtailment Evolution [%]

Curtailment from grid constraints has pressured renewable generation results

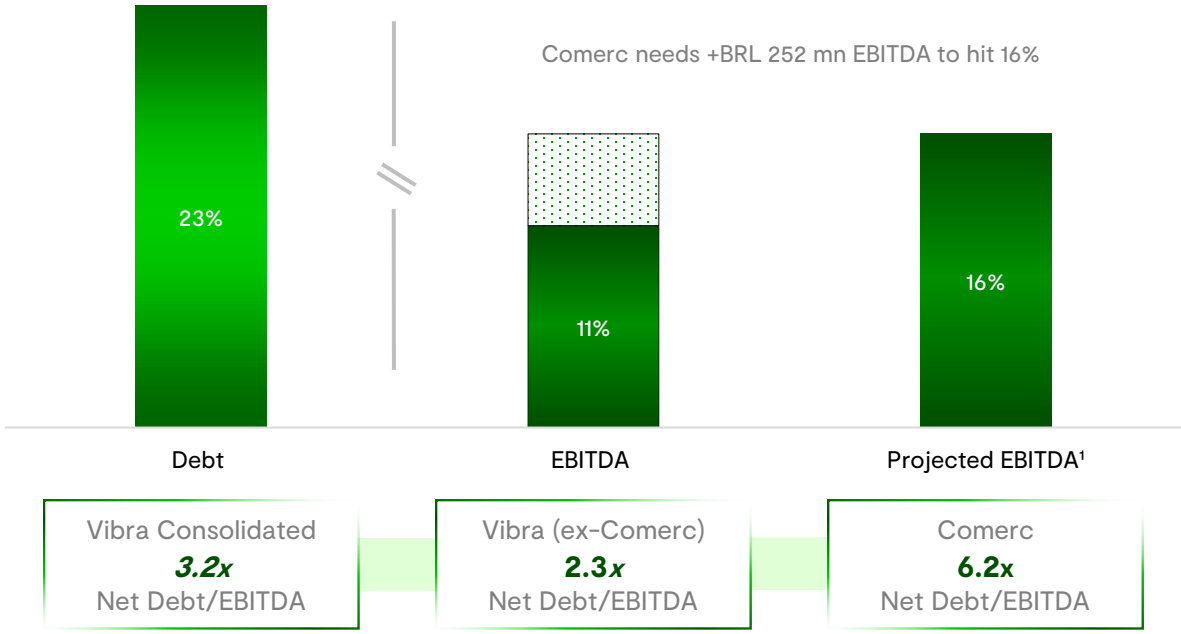

What is Curtailment?

It occurs when grid operators force renewable generators to reduce output despite available capacity, due to transmission constraints or oversupply, directly compressing asset revenues and returns

Comerc's Debt Weight in Vibra's Total vs EBITDA Performance [2025, %]

Underwhelming performance with rising debt and EBITDA below expectations

***Comerc's EBITDA and EBITDA Margin** [BRL mn, %]*

	2022	2023	2024	2025	Analysis
EBITDA	667	648	510	686	+2.3% Growth in 4 Years
EBITDA Margin	16.5%	14.4%	11.5%	11.5%	(Δ 5%) Margin Loss

Sources: Comerc, ONS, Vibra

Notes: (1) Projected EBITDA Share Pre M&A Guidance

From Premium to Discount: Vibra's Multiple Re-Rating

Vibra's expensive strategic misallocation in a business non-core and with structural problems, drove a sustained compression in multiple

Vibra's and Ultrapar's EV[1]/EBITDA Fwd 1Y Spread

Poor capital allocation decisions, particularly the Comerc acquisition, eliminated Vibra's historical premium and now trades at a lower multiple than Ultrapar

Loss of Pure-Play Premium

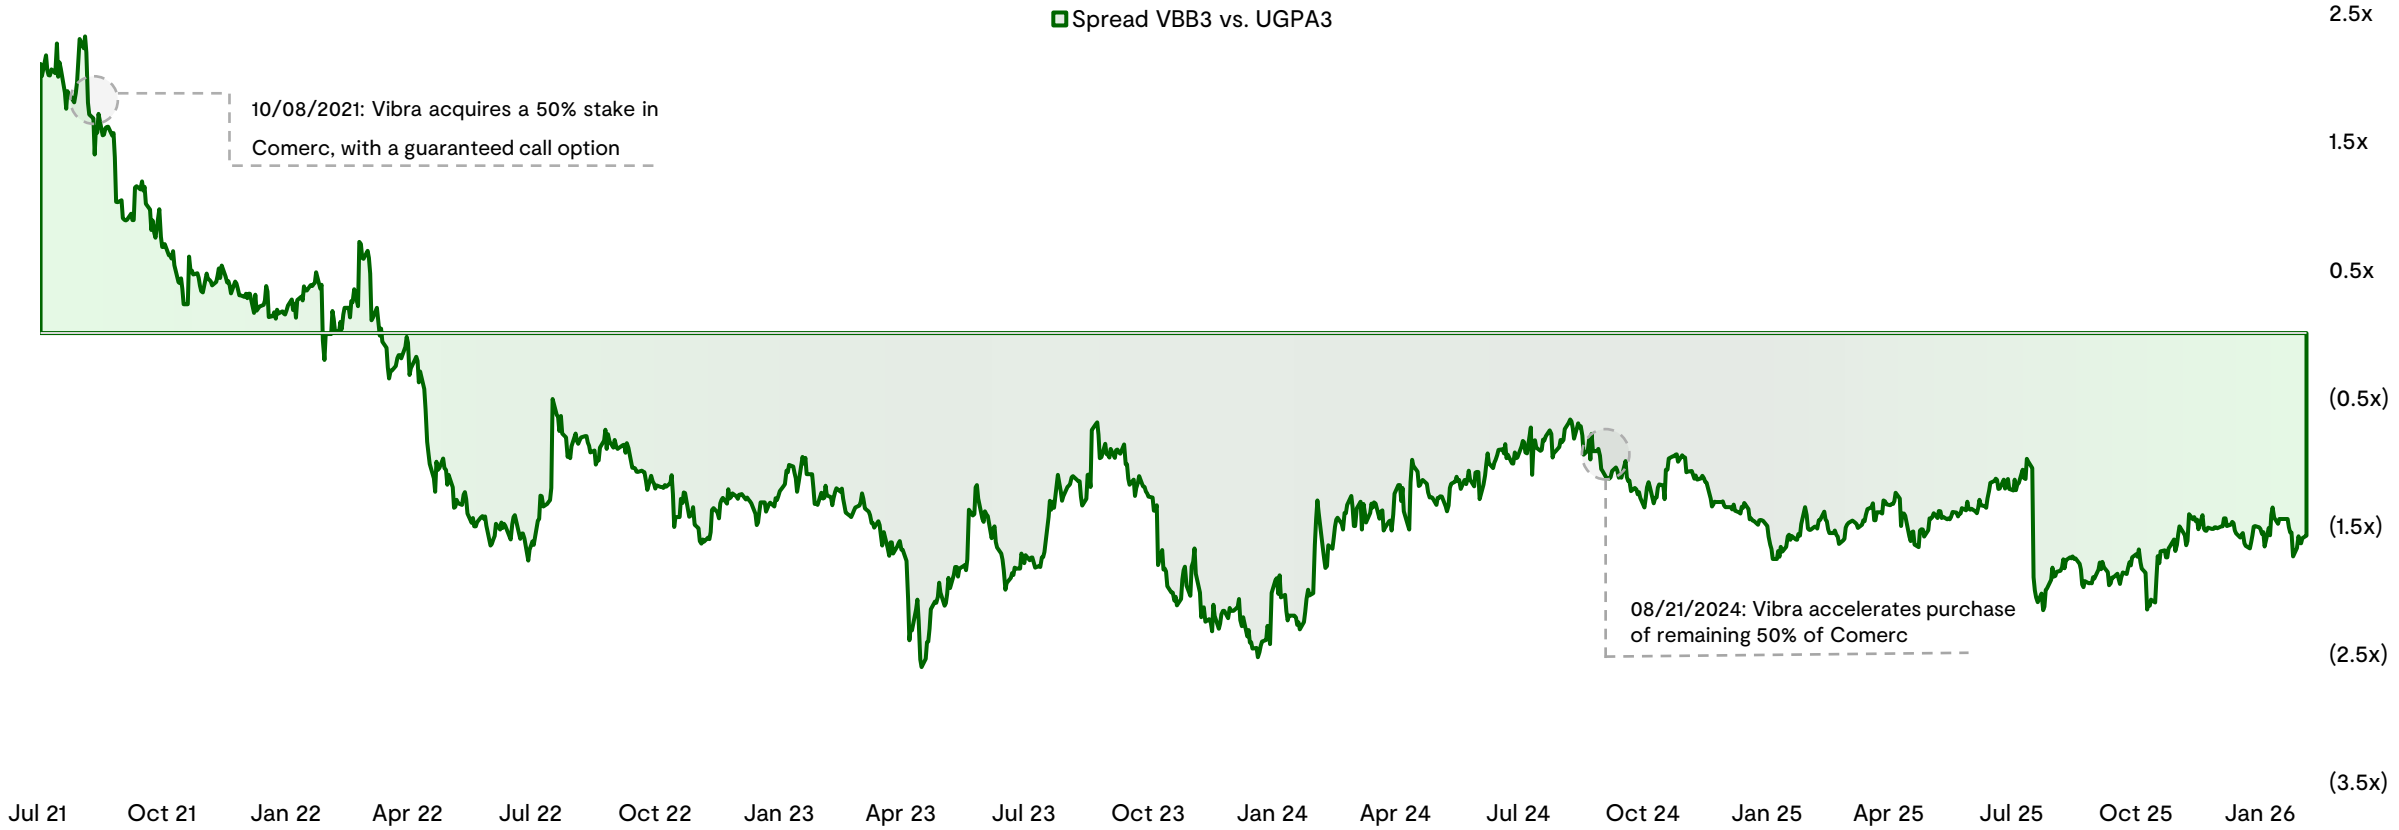

The +16,1% pure-play premium evaporated after Comerc, leading to multiple compression as expectations were not met

Idiosyncratic, Not Setorial

The de-rating was company-specific, as peers [Ultrapar, Raízen] moved in line with macro while Vibra structurally de-coupled

Structural Shift Post-Curtailment

Market began pricing curtailment and its volatility as structural, embedding a permanent discount into forward multiples

Sources: Bloomberg, Ultrapar, Vibra

Notes: (1) Comerc's debt is not included and Ultrapar extraordinary 3Q23

Investment Thesis

Divestiture of Comerc

Spin-Off of Distributed Generation to a FII

Divestiture of Comerc's DG operation, being sold to a FII with a premium due to its better business model and FII's tax benefit. Shares are sold to individuals, that also don't pay taxes in their returns

Merger of Comerc Ex-DG with EDF Power Solutions

Renewable energy sector is discounted due to curtailment issues, being so that a merger's synergies are a great way to gain margins, and a player that is seeking to expand its presence stands out, EDF Power Solutions

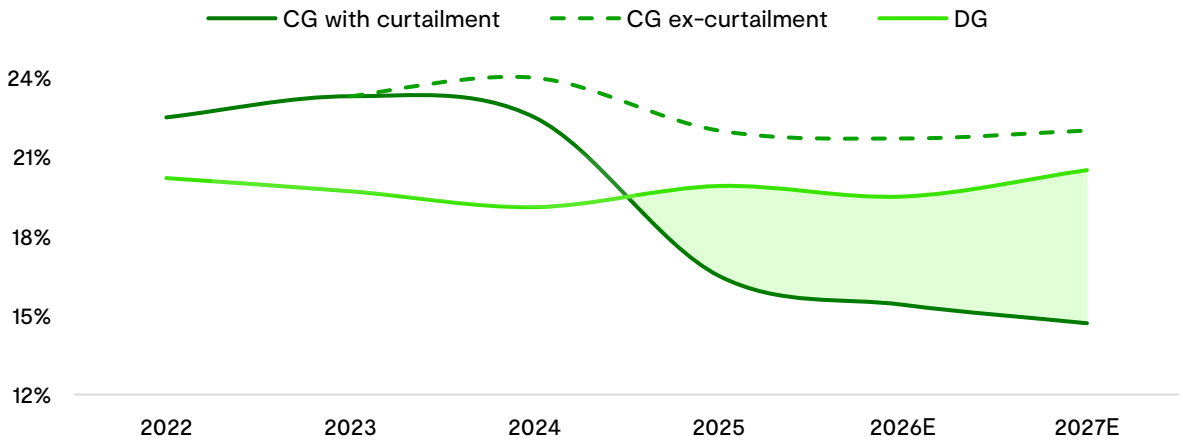

Distributed Generation Shielded from Curtailment

VIBRA

DG's insulation from curtailment and its tariff-free regime allow it to trade at premium multiples, distinguishing it from CG

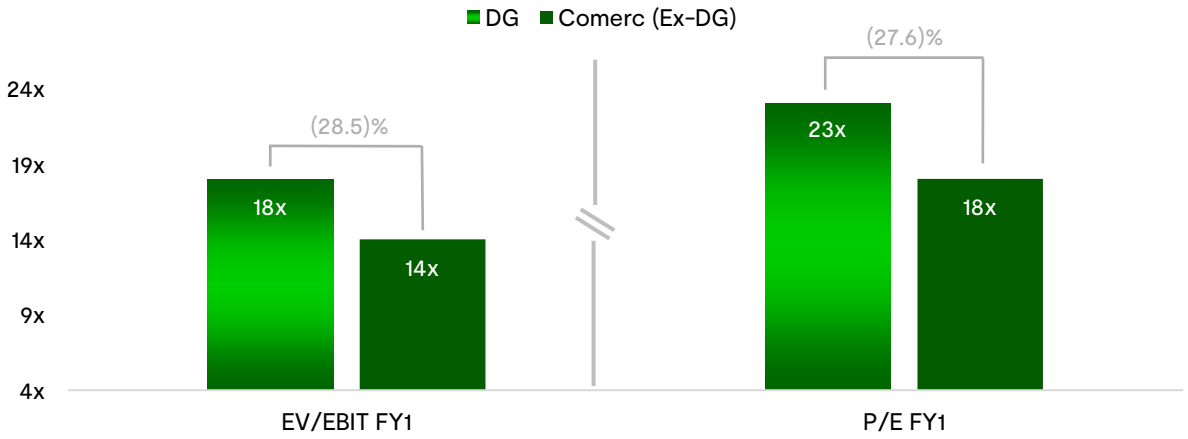

Solar Capacity Factor [%]

Curtailment pressures CG, while DG remains unaffected

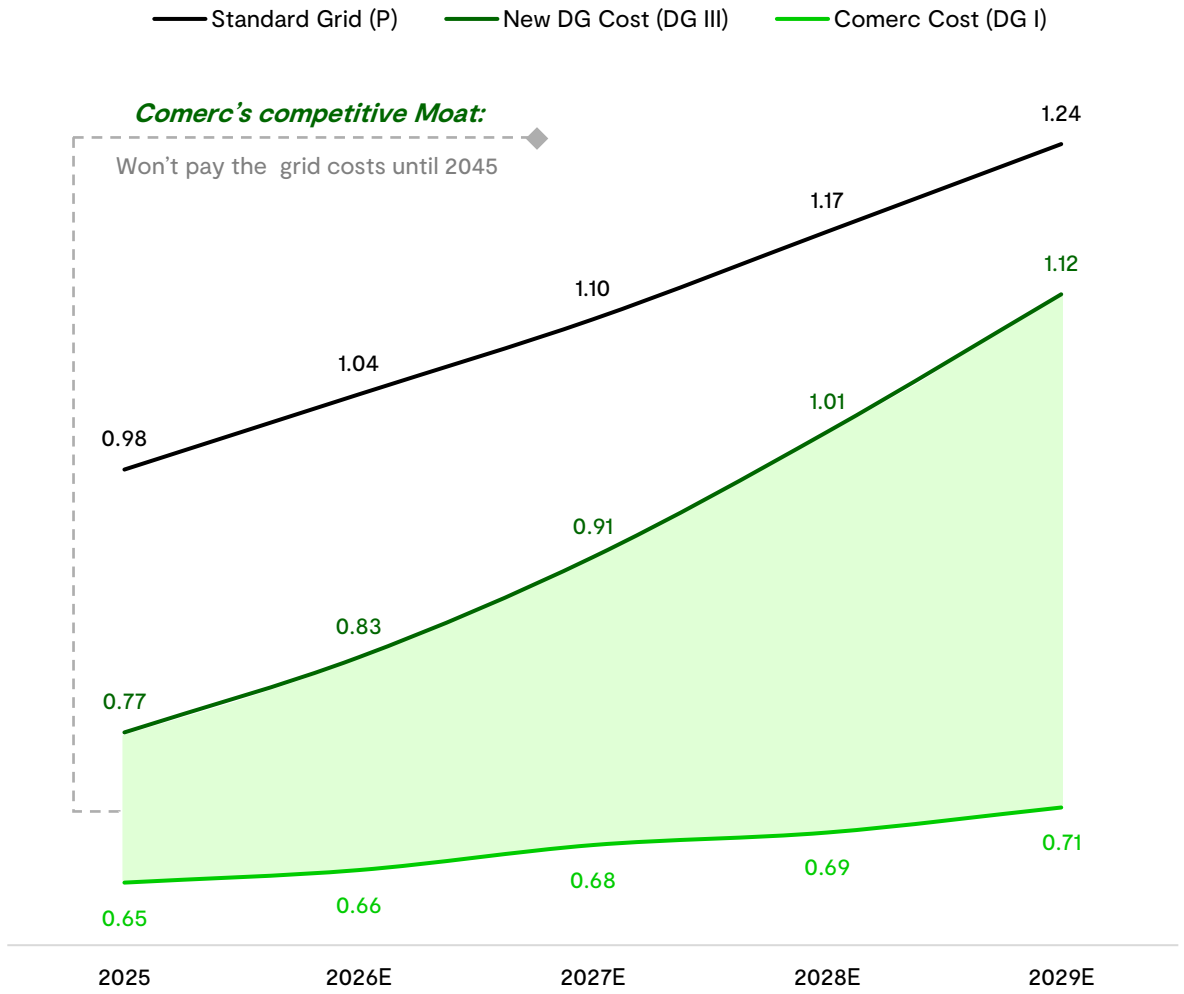

Comparable Renewable Platform Multiples FWD 1Y [x, %]

DG commands a premium multiple given its limited exposure to curtailment

Electricity Tariff Divergence Under Regulatory Asymmetry [BRL/KWh]

Grandfathered portfolio with protected fiscal treatment sustains a pricing advantage

Sources: ANP, Capital IQ, Comerc, ONS

Notes:

FII Unlocks DG Value

VIBRA

High-quality DG assets combined with FII tax efficiency create a natural premium in transactions

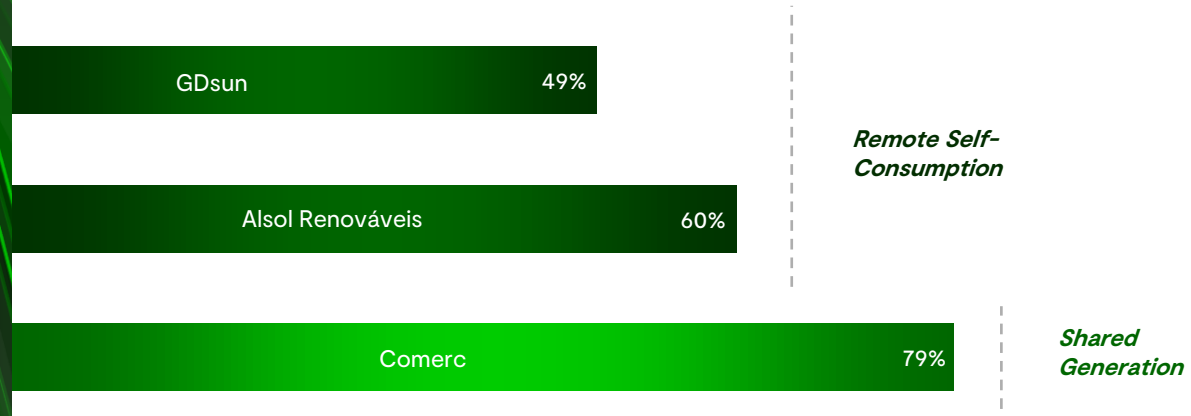

Comerc's Margin Edge in Shared Generation

Shared Generation's retail consortium structure unlocks higher operator margins

	Remote Self-Consumption	*Shared Generation*
	Credits are allocated to a single larger consumer with multiple subsidiaries	Credits are allocated to retail consumers through a consortium
Main Players:	GDSUN	comerc energia
Client Type	Larger Companies	Retail
Client Bargaining Power	High	Low
Client Discount	Higher	Lower
Operator Margin	Lower	Higher

Comerc is the only scaled player in its model, delivering structurally higher margins in the sector

DG's EBITDA Margin [%]

Tax-Efficient FII Structure

The FII structure shifts DG assets to a vehicle benefiting from favorable tax treatment

SNEL11 raises R$620 million and its market value rises to R$950 million (SUNO)

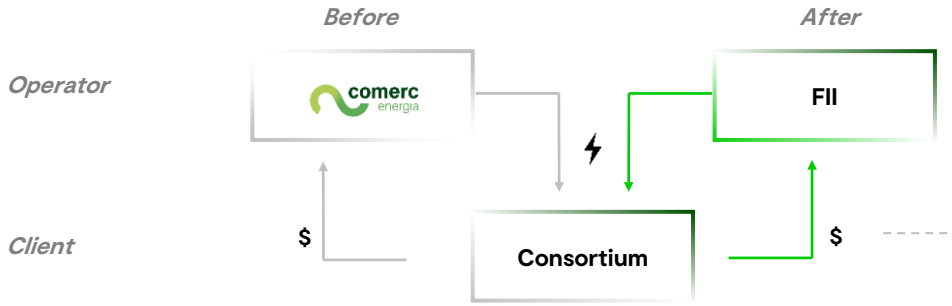

Summary:

- Fourth follow-on offering completed, expanding equity base and funding new solar assets
- Fund strengthens position in distributed generation with operational photovoltaic projects

01/05/2026

The Business in Different Hands

A Distributed Generation (DG) operation produces electricity that is injected into the grid, generating energy credits that are allocated to a consumer consortium

The FII Advantage

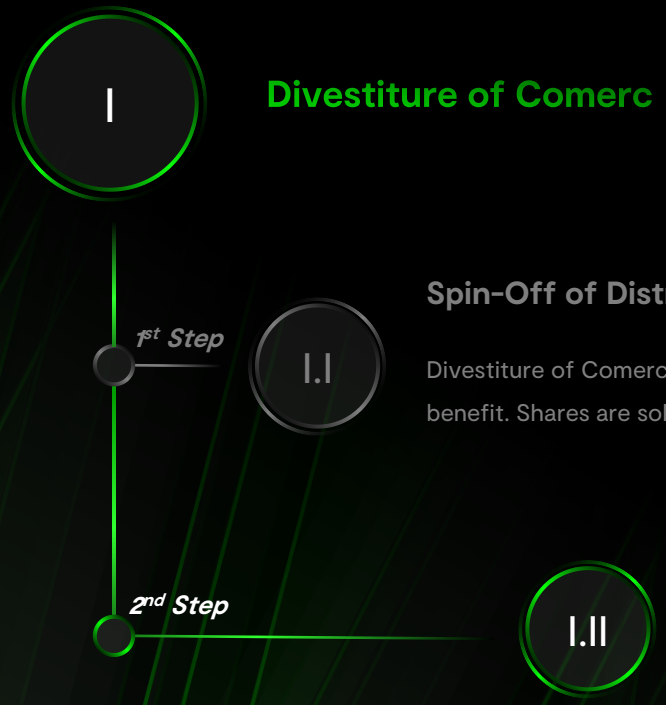

The FII benefits from a 0% tax structure as income comes from lease payments from a consumer consortium. This allows the FII's sale for a premium

18.1% Premium

Sources: Comerc, Suno, Vibra

Notes:

Investment Thesis

Divestiture of Comerc

Spin-Off of Distributed Generation to a FII

Divestiture of Comerc's DG operation, being sold to a FII with a premium due to it's better business model and FII's tax benefit. Shares are sold to individuals, that also don't pay taxes in their returns

Merger of Comerc Ex-DG with EDF Power Solutions

Renewable energy sector is discounted due to curtailment issues, being so that a merger's synergies are a great way to gain margins, and a player that is seeking to expand it's presence stands out, EDF Power Solutions

EDF Renewables, At a Glance

A global renewable leader repositioning its portfolio and expanding its focus on renewables in Brazil

EDF is a French multinational electric utility founded in 1946 and owned by the French government. The company entered Brazil in the late 1990s and operates mainly in renewable energy generation, developing and operating wind and solar projects. It also has activities in hydropower, power transmission, and energy commercialization in the Brazilian market

Shareholder Structure

French State — 100%

[BRL bn]	[2025]
EBITDA	0.3
CapEx	0.7
Net Debt/EBITDA	3.5x
Total MW	1,887
No. of Plants in Brazil	6

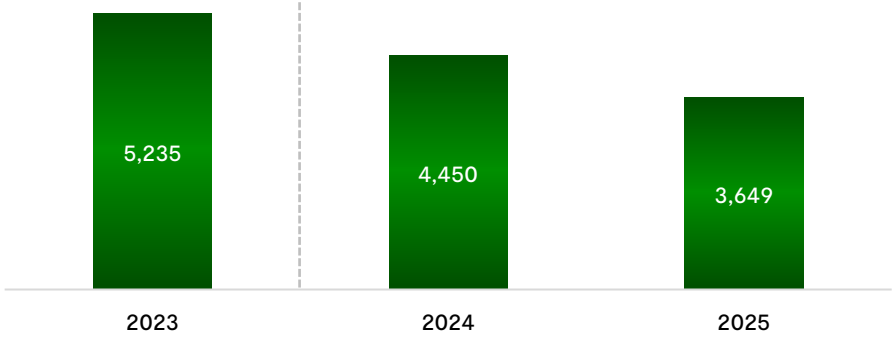

Brazil Operation Revenue [BRL mn]

Revenue declines after UTE Norte Fluminense exit and renewables shift

CAGR 2023 – 2025: ***(16.5%)***

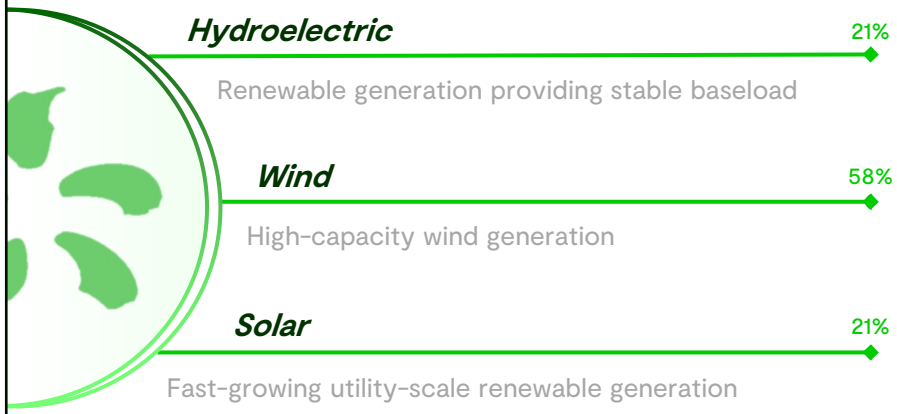

UTE Fluminense's PPA Agreement Terminated

Curtailment Issues

Brazil Operation Segments [% of Total Capacity]

Three complementary segments forming EDF

Hydroelectric — 21%

Renewable generation providing stable baseload

Wind — 58%

High-capacity wind generation

Solar — 21%

Fast-growing utility-scale renewable generation

Why EDF as a Partner?

Renewable Expansion in Brazil — I

EDF sold Norte Fluminense and is shifting toward renewables in Brazil, seeking partners to advance its projects

Consolidation in a Challenging Market — II

Curtailment has hit the sector hard and left valuations discounted, creating a timely consolidation opportunity

Cost Optimization and SG&A Synergies — III

The transaction would streamline corporate structures, reduce SG&A expenses, and enhance margins

Sources: EDF

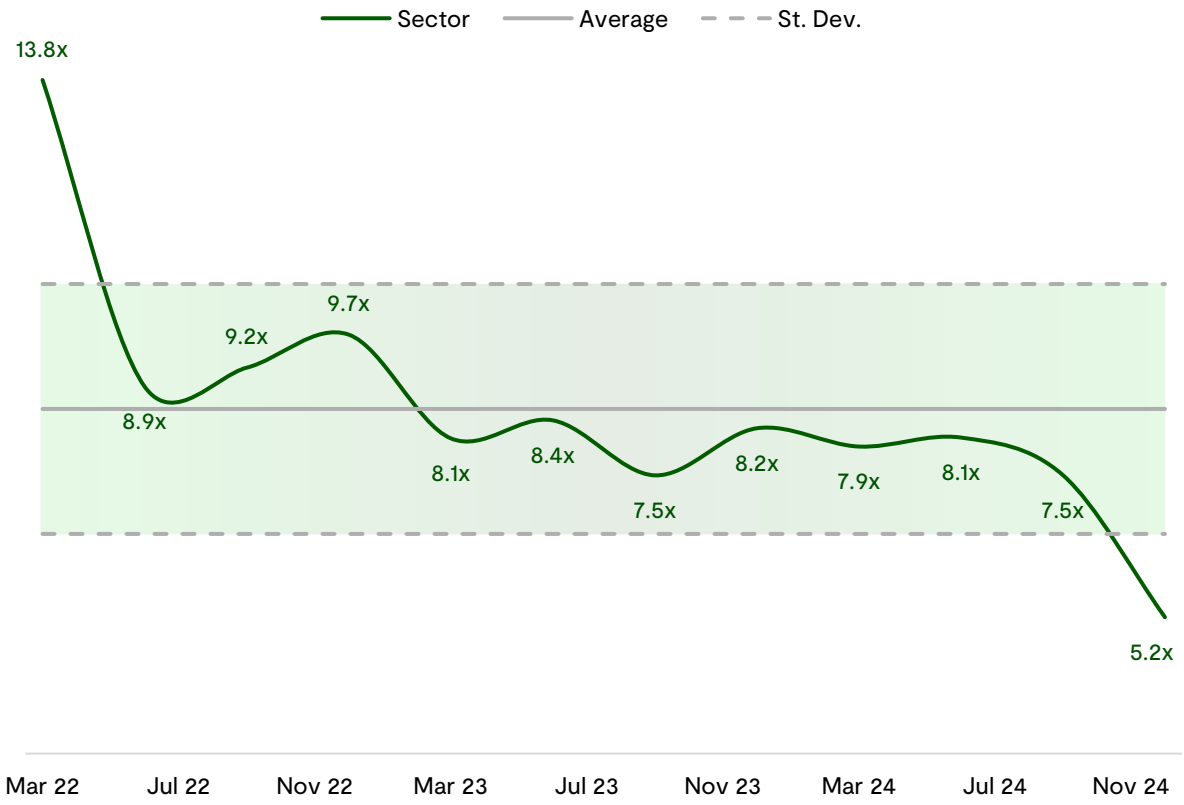

Notes:

Curtailment Creates Consolidation Opportunity

Structural curtailment issues have compressed renewable valuations, opening room for sector consolidation

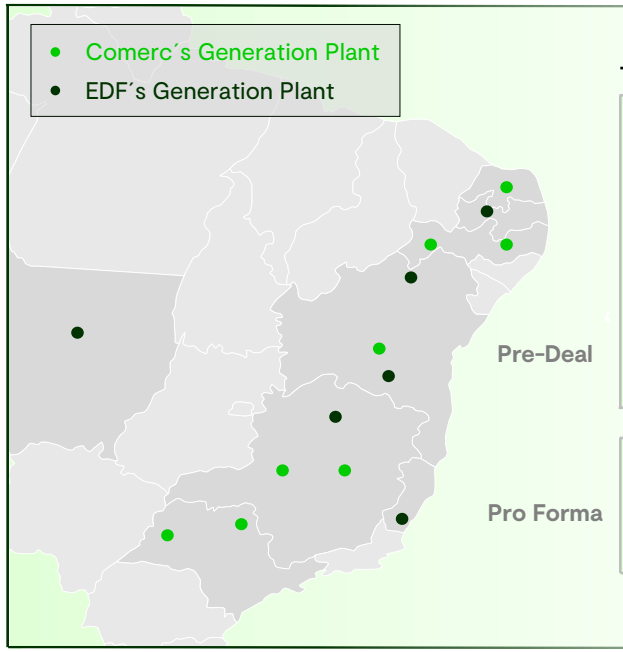

Renewable Generation Sector[1] EV/EBITDA FWD 1Y [x]

Curtailment have been pressing renewable valuations, driving sector multiples down

Proforma Renewable Portfolio [MW]

The combined platform significantly expands scale and diversification across renewable assets

	Hydroelectric	Wind	Solar
Comerc	-	280	1.542
% as Total	**0%**	**15%**	**85%**
EDF	402	1.085	400
% as Total	**21%**	**60%**	**22%**
NewCo	402	1.365	1.942
% as Total	**10.8%**	**36.8%**	**52.4%**

Sector Dislocation Creates Consolidation Opportunity

Curtailment has pressured Brazil's renewable sector, driving valuation multiples down from ~13x to ~5x. This sharp compression creates an attractive opportunity for consolidation at discounted entry levels.

Key Aspects Regarding Centralized Generation

PPA Model

Long-term contract for energy sales between generator and buyer under fixed terms

Stable Revenue

This structure locks in predictable and contracted cash flows over time

Where Value is Created

Since revenue is largely fixed, margin expansion comes from cost reduction

Sources: Comerc, EDF, ONS, Vibra

Notes: (1) Average between Engie's and Auren's multiples

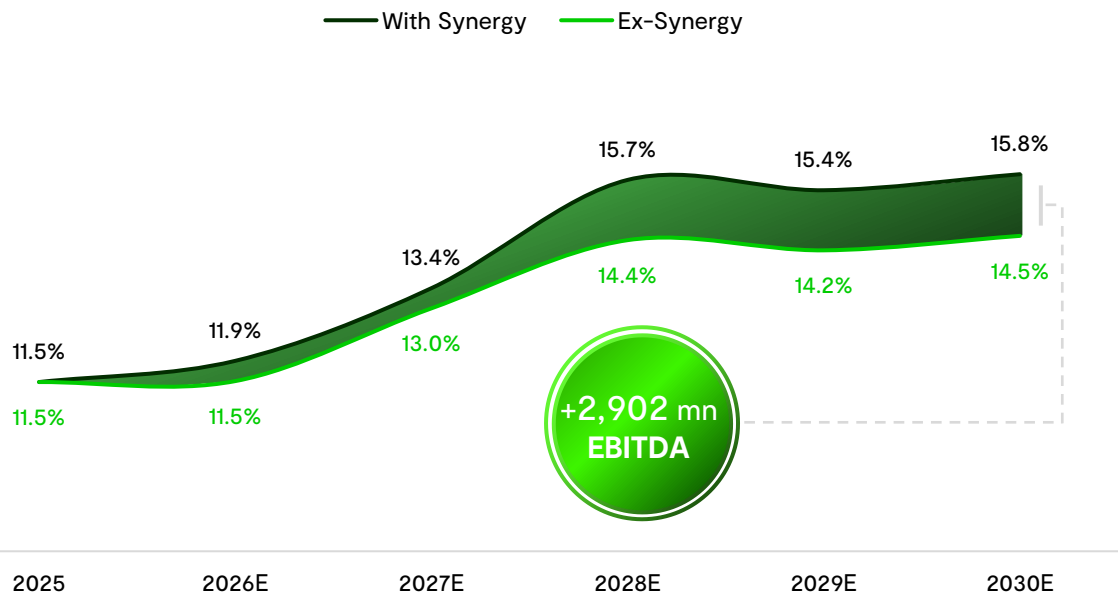

Value Generation With Synergies

VIBRA

Disciplined PMSO reductions unlock meaningful synergies, supporting EBITDA expansion and long-term value creation

EBITDA Margin: With vs. Without Synergies [%]

Operational efficiency gains translate into sustainable EBITDA uplift

Synergy Net Present Value [BRL mn]

8,866	−	8,142	=	725
EV With Synergies		EV Without Synergies		Total Synergy Value

Assumptions

2.8% Reduction in CG

1.0% Reduction in Trading

Comparable Past Transactions

Historical M&A cases indicate achievable cost normalization levels

Year	Acquirer	Target	PMSO Reduction [%]
2021	Equatorial	Echoenergia	(6.9)

Investment Thesis

I

Divestiture of Comerc

A two-step structured spin-off aiming to maximize value in the divesture, to pave the way to re-rating of Vibra's multiples, deleverage the holding and other value creation opportunities

II

Moove Acquisition to Build a Lubricants Champion

PE-backed acquisition of Moove to help Vibra complete a long-desired strategic move, followed by a spin-off of international assets to focus on Brazil and create a national lubricants champion with Lubrax

III

Unlocking Credit to Capture Market Share

After "Carbono Oculto" tightened credit, Vibra can use retailer data to restore financing access to branded stations and capture share from credit-constrained white-flag players

Lubricants: A Higher Margin Business Within Vibra

Technical differentiation and low-cost relevance support structurally higher margins segment

Lubricants Supply Chain Architecture

A specialized chain where formulation, logistics and brand strength drive margins

1	2	3	4
Raw Material Supply	Lubricant Manufacturing	Logistics Distribution	Sales & End Channels

1. Supply base oils through oil refinery and develop chemical additives
2. Formulate and blend base oils with additives for specific products
3. Manage inventory, specialized transport, and technical support for B2B
4. Purchase point and product application for retail/industrial consumers

BR · Chevron · Lubrax · moove · ICONIC · PETRONAS

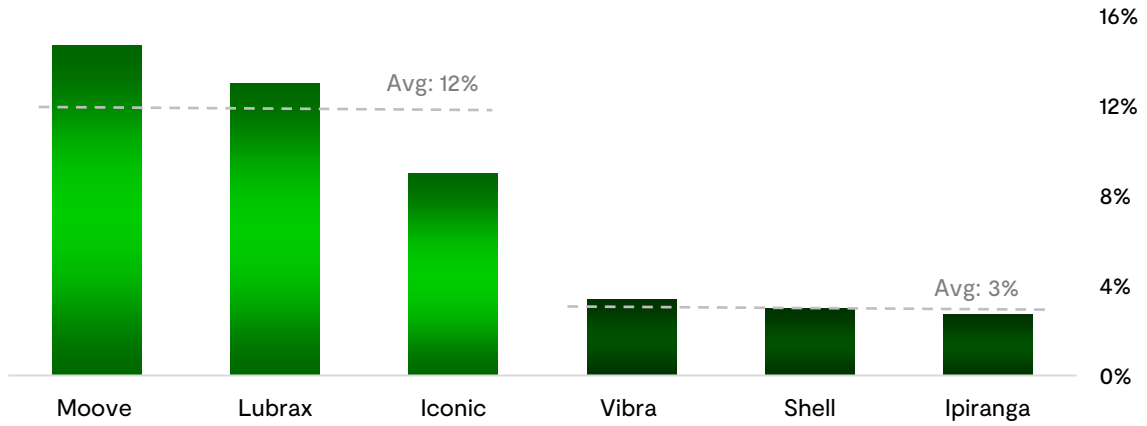

Breakdown of Heavy-Duty Truck Monthly Operating Costs

Small cost share creates low price sensitivity and supports premium pricing

	Est. Monthly Value	% of Cost
Fuel [Diesel]	24,000	74%
Maintenance	3,500	11%
Tires	2,800	9%
Insurance & Fees	1,500	5%
Lubricants	600	2%
Total	**32,400**	**100%**

Business's EBITDA Margin [%]

Lubricants monetize differentiation into margins, while fuel distribution relies on scale and spread

Lubrax, At a Glance

LUBRAX

Vibra's Lubrax makes specialized lubricants for the automotive and industrial sectors. Its business model centers on high-margin, conventional and premium products with recurring sales

Shareholder Structure

VIBRA — 100% — LUBRAX

Key Financials [BRL bn] [LTM]

Net Revenue:	3.1	Price:	10.6 BRL/m³	Volume:	35 mn m³	Gross margin:	12.4 %

Sources: Cosan, Iconic, Vibra

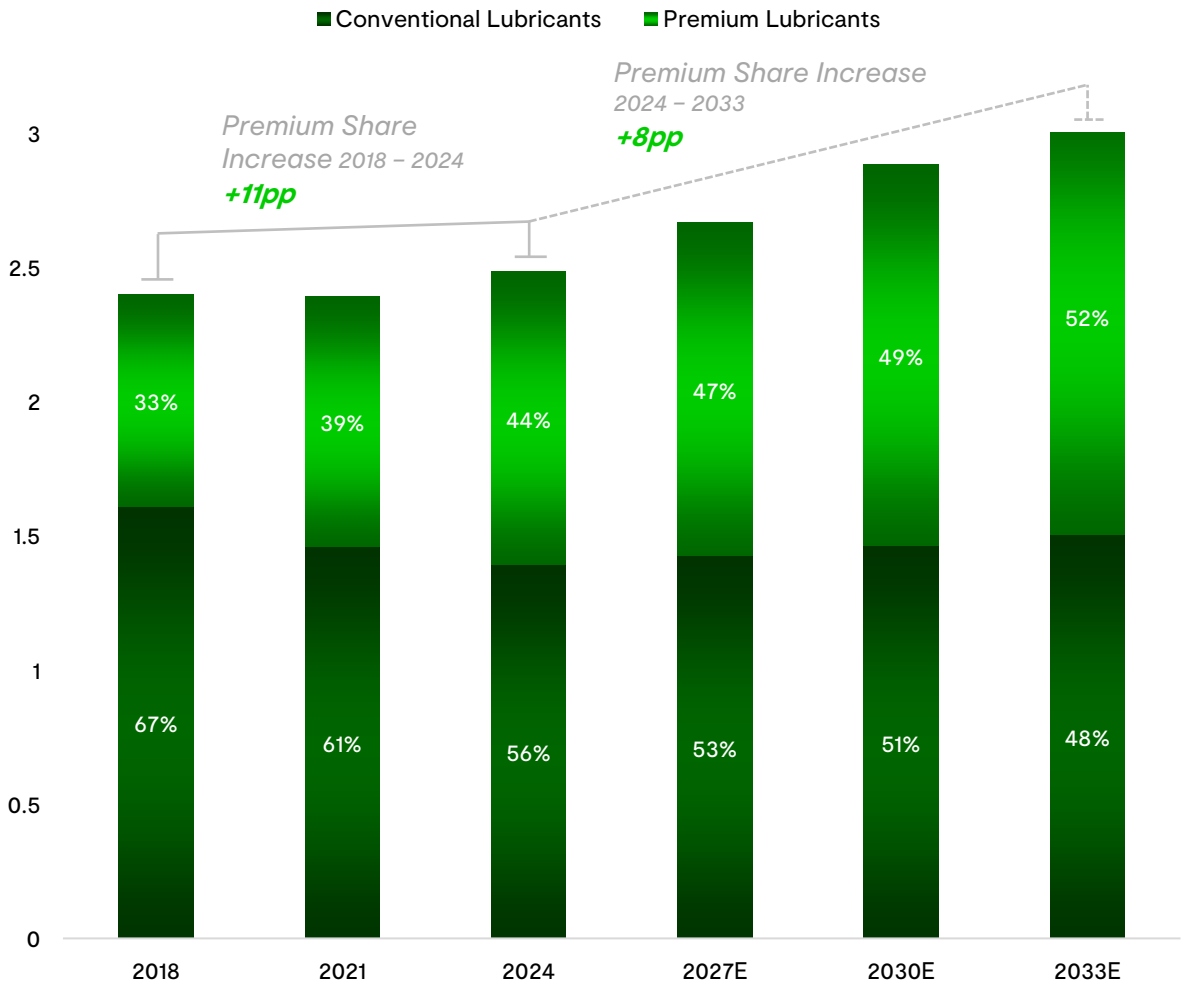

Notes:

Lubrax is Mispositioned for the Next Growth Tendencies

Premium lubricants is where the market growth is, but it is also where Lubrax remains structurally underpositioned

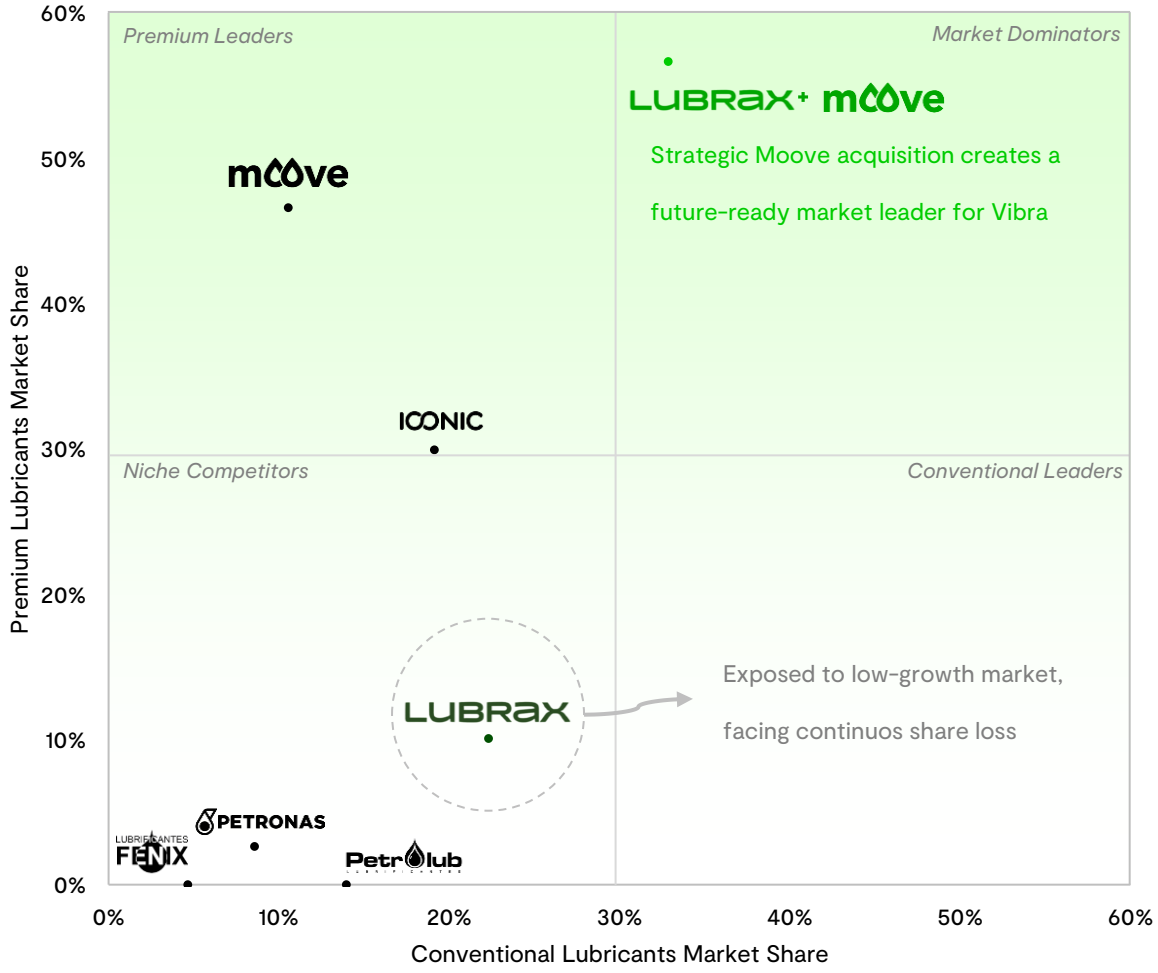

Lubricants Market Volume [bn liters]

Lubricants market is shifting toward premium products

Premium vs Conventional Lubricants Market Share [%]

Moove is structurally aligned for growth, while Vibra´s Lubrax faces a battle against the market

Sources: Fenix, Iconic, Petrolub, Petronas, UBS, Vibra

Notes:

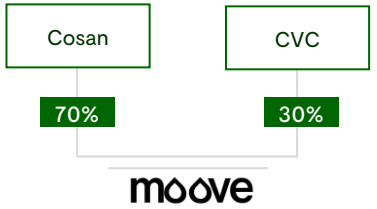

Moove, At a Glance

A leading lubricants platform with strong growth, global footprint and clear strategic fit for Lubrax

moove

Moove is a Brazilian lubricant company founded in 2008. The company produces and distributes automotive and industrial lubricants, including the Mobil brand in Brazil under a license from ExxonMobil, with operations across LatAm, Europe and EUA. It focuses on supplying lubricants for passenger vehicles, heavy-duty transport, agriculture and industrial equipment

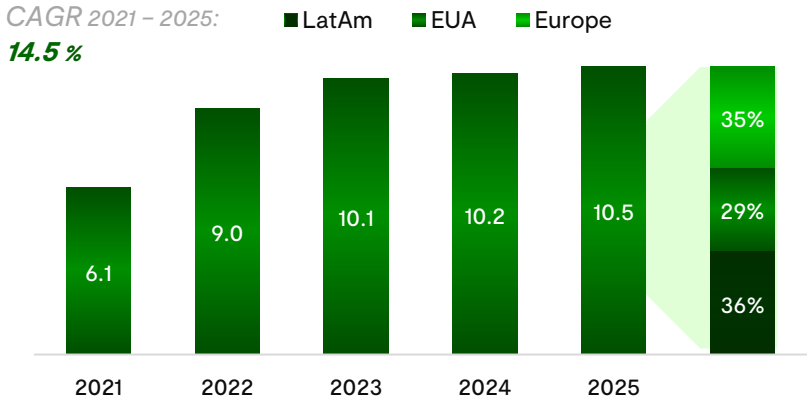

Shareholder Structure

[BRL bn] [mn liters]	[2025]
Enterprise Value	9.7
EBITDA Margin	16.2%
Net Debt/EBITDA	2.9x
Volume	596
ROIC	14.0%

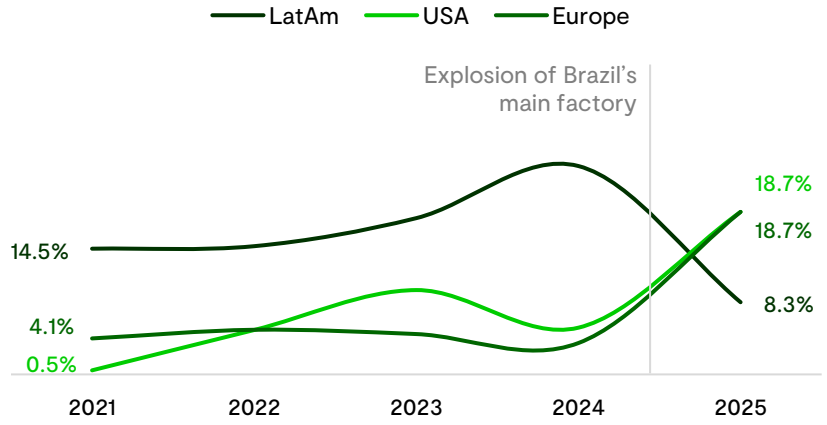

Net Revenue and Revenue Breakdown [2025] [BRL bn]

Revenue growth backed by geographic diversification

EBITDA Margin per Region [%]

Plant fire pressures LatAm, while U.S. and Europe expand margins

Why Moove as a Target?

Highly Synergistic Deal — I

Captures revenue synergies via complementary portfolios and scales cost efficiencies through shared infrastructure

Strategic Opportunity — II

A unique window created by Cosan´s deleveraging focus and CVC´s urgent need for liquidity following the postponed IPO

LatAm Expansion — III

Fulfills Vibra´s Lubrax regional growth strategy by acquiring Moove´s established South American operations

Sources: Cosan, SEC, Vibra

Notes:

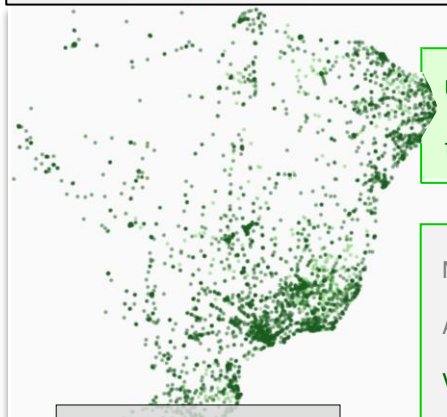

From Network Scale to Premium Upside

Combining Vibra's channels with Moove's platform creates scale synergies and helps reposition Lubrax toward premium lubricants

Top-Line
Retail Channel Amplification & Premium Pricing Uplift

Cost Optimization
Idle Capacity Integration & Operational Efficiency Gains

Retail Channel Amplification

Unlocking nationwide Moove expansion by pivoting from Ale's footprint to Vibra's network of +7,600 points of sale

Reopening the Moove Window

VIBRA

Comerc deconsolidation gives Vibra the balance sheet room to pursue Moove without breaching leverage comfort levels

A Synergistic Deal, Previously Blocked by Leverage

Cosan's price was too high for Vibra's balance sheet at the time, after Comerc deconsolidation, Vibra can pursue Moove with lower leverage pressure

Vibra approaches Cosan regarding the future of Moove — Brazil Journal

Summary:

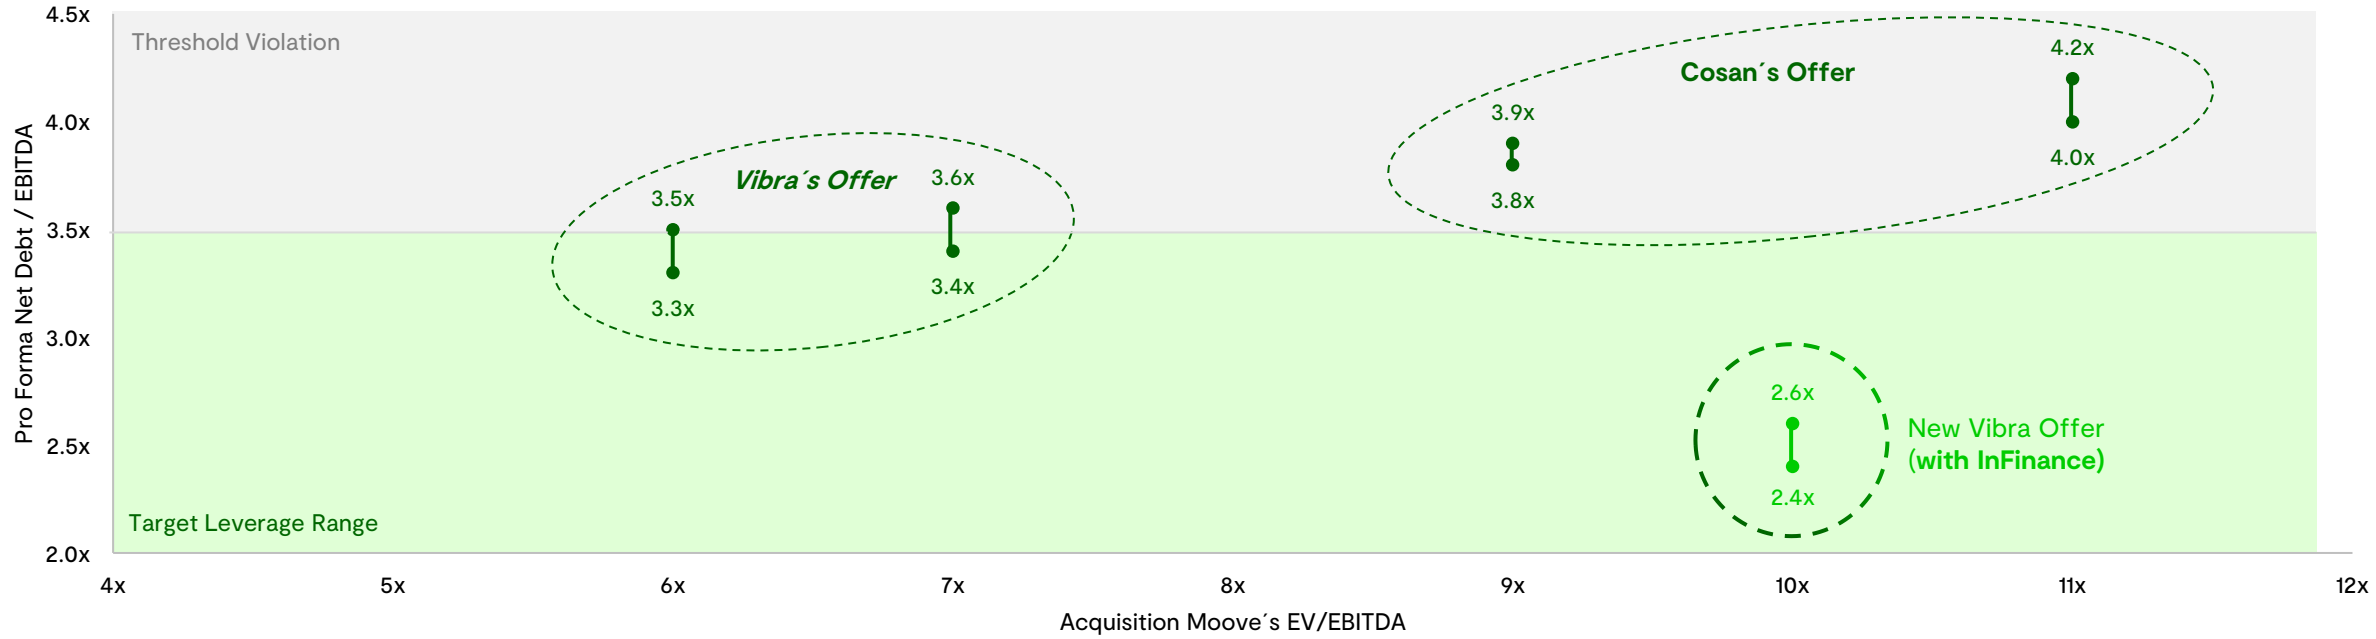

- Vibra proposed merging lubricant operations with Cosan to create a market leader
- Valuation gaps and governance disputes blocked the deal from moving forward successfully

06/17/2025

Sell Side Analysis at the Time

Expected Synergies	Critical Negative Limit	Avg. Leverage Range
BRL **400** mn/year	**3.5**x Net Debt/EBITDA	**0.2**x Net Debt/EBITDA
Bradesco BBI	Santander	*With Synergies x Ex-Synergies*

Acquisition Feasibility & Leverage Thresholds[1]

Sources: Brazil Journal, Bradesco BBI, Cosan,

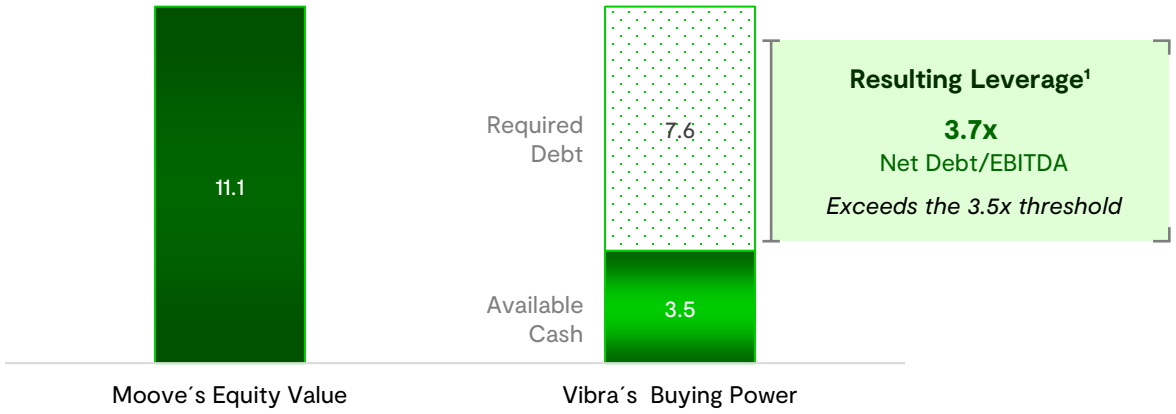

Notes: (1) The gap between curves represents the de-leveraging power of operational and cost synergies, R$ 400 million, estimated at the time by Bradesco BBI

PE Partnership Unlocks Moove´s Acquisition

PE equity and asset-backed bridge debt allow Vibra to pursue Moove while using international divestments to delever post-transaction

Moove´s Value vs Vibra´s Buying Power

Without a PE partner, Vibra would require BRL 7.6 bn in additional debt, pushing leverage to 3.7x

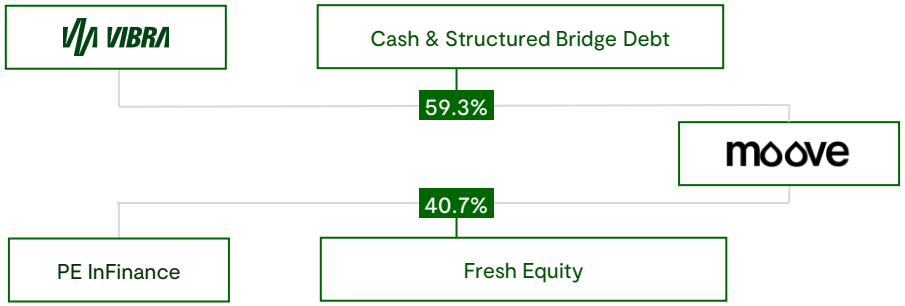

Resulting Leverage[1]

3.7x

Net Debt/EBITDA

Exceeds the 3.5x threshold

Co-Investment Structure

- Pure-play exposure to Moove's upside, unfiltered by Vibra's corporate structure
- Fully aligned incentives between both partners

Funding Structure | Debt-to-Asset Alignment

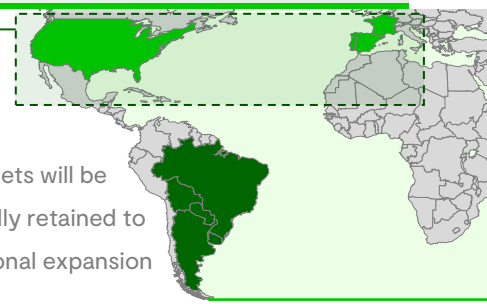

M&A debt is pegged to international asset value. This bridge loan will be fully repaid upon divestment, ensuring a leverage-neutral transaction for the core business

$$D = A_{int} \cdot S \qquad S = \frac{C + D}{E} \qquad D = \frac{A_{int} \cdot C}{E - A_{int}}$$

- D: Deal Debt
- S: Vibra Stake
- E: Moove Equity
- A_{int}: Intl. Asset Value
- C: Cash Consideration

International Asset Value[2] [BRL mn]

2,394	+	3,086	=	5,480
Europe		North America		Total

LatAm assets will be strategically retained to drive regional expansion

Deal Debt Calculation [BRL mn]

$$D = \frac{A_{int} \cdot C}{E - A_{int}} \Rightarrow D = \frac{5{,}480 \cdot 3{,}532}{11{,}098 - 5{,}480} \Rightarrow \boldsymbol{D = 3{,}050}$$

Total bridge loan facility required to fund the M&A, fully repaid upon divestment of non-core assets

Sources: Cosan, Vibra

Notes: (1) Including Moove´s Assumed Debt; (2) Before Taxes

Creating Brazil's National Lubricants Leader

Lubrax and Moove combine complementary channels, segments and capabilities to build a broader LatAm lubricants platform

Investment Thesis

I

Divestiture of Comerc

A two-step structured spin-off aiming to maximize value in the divesture, to pave the way to re-rating of Vibra's multiples, deleverage the holding and other value creation opportunities

II

Moove Acquisition to Build a Lubricants Champion

PE-backed acquisition of Moove to help Vibra complete a long-desired strategic move, followed by a spin-off of international assets to focus on Brazil and create a national lubricants champion with Lubrax

III

Unlocking Credit to Capture Market Share

After "Carbono Oculto" tightened credit, Vibra can use retailer data to restore financing access to branded stations and capture share from credit-constrained white-flag players

“Carbono Oculto” Tightens Credit Across Fuel Stations

VIBRA

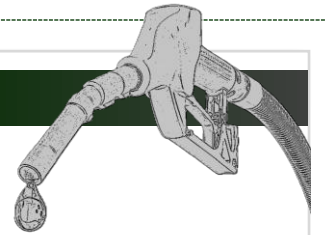

With banks reducing credit lines, fuel stations struggle to fund working capital amid unfavourable payment and receivable cycles

Trade-Off Between Branded and White-Flag Stations

Brand affiliation brings credibility and distributor support, but reduces pricing flexibility

	RECOGNITION	VOLUME	MARGIN	SUPPORT
Flagged	National	High	Lower	Structured
White-Flagged	*Local*	*Volatile*	Higher	*Basic/None*

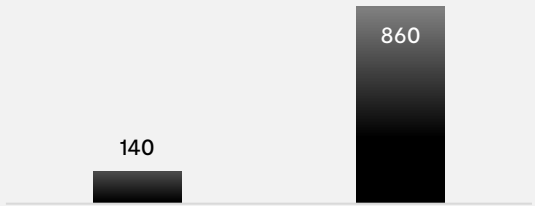

“Carbono Oculto” Operation

Initiated in August 2025, uncovered a massive criminal infrastructure within the fuel industry.

Between 2020 and 2024, the group laundered approximately R$ 52 billion in drug money using 1200 gas stations and illegal financial platforms. The scheme caused a staggering R$ 7.6 billion deficit in public coffers

1000 Gas Stations in Illegal Operations and Couting...

GMC GODOY & MELLO CONSULTORIA E ADVOGADOS

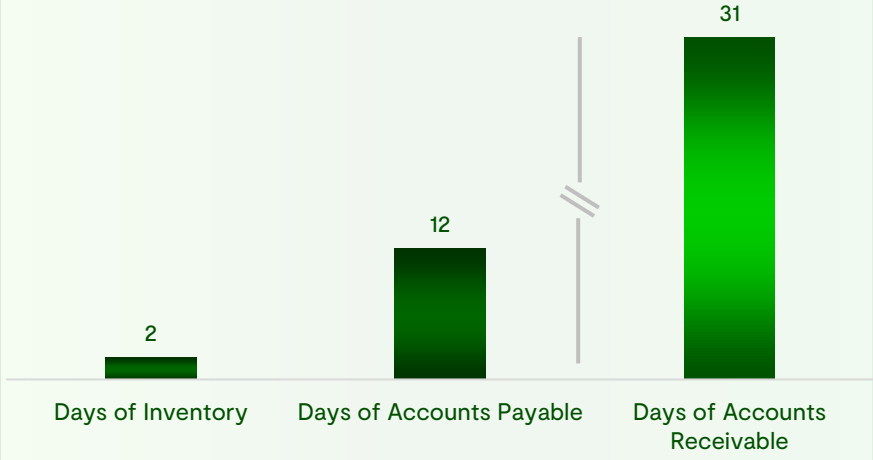

Adriana Mello
Legal Counsel for Fuel Stations

“After the operation, **banks stopped extending credit to legal entities in the fuel station sector.** It is still possible to work with existing debts, but not to issue new credit”

Gas Stations Need Credit

Due to working capital constraints, a fuel station typically requires structural leverage to operate at an average level

2.5x Structural Net Debt/EBITDA

Sources: Agência Gov, Folha de S. Paulo, GMC Godoy & Mello

Notes:

Credit Unlock to Accelerate Network Growth

A bank partnership supported by Vibra's data unlocks financing for branded stations and drives incremental openings

Vibra as a Credit Enabler

Vibra holds valuable data that gas stations could share with banks, but the stations themselves lack sufficient credibility

Before

Gas Stations ⇄ Bank

- No longer possible due to "Carbono Oculto" operation as gas stations lack of credibility

After

1. Retailer requests financing: Gas Stations → Vibra
2. Vibra shares retailer financials: Vibra → Bank
3. Bank returns to give credit directly to retailer

How it would work ?

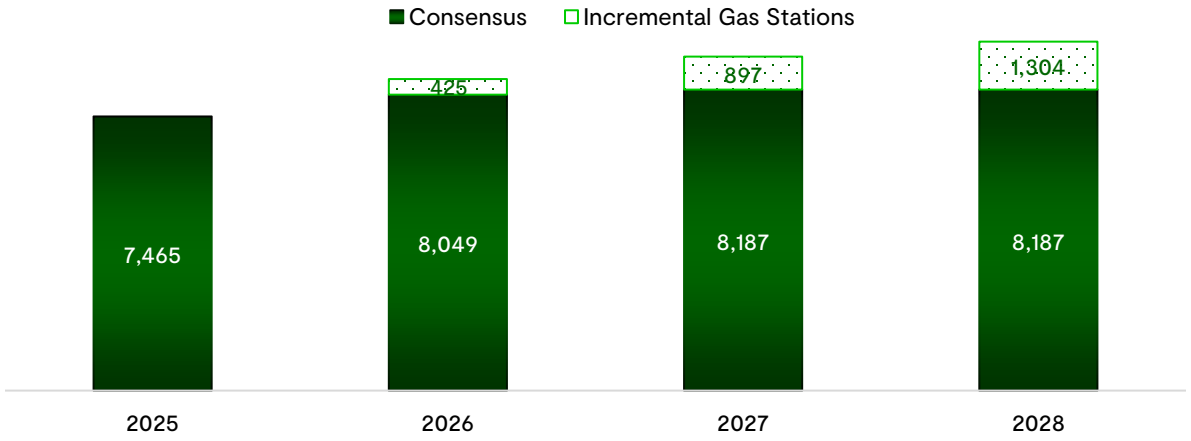

Vibra acts as a strategic data bridge between banks and service stations. By providing lenders with reliable data for credit assessments, mitigating financial risk and streamline the approval process.

Main assumptions

- Fuel retailers share confidential contract information with Vibra in ongoing contracts
- No first-mover advantage; new station flow will be distributed across branded companies[1]

Station Openings Above Consensus [#]

Credit access accelerates Vibra's expansion, adding stations above consensus

Stations Openings: Stressing Key Variables [#]

Despite changes in key variables, the openings continue to show a significant result

Vibra's share of capture [%] \ Gas Stations Expected to Join [%]	30%	35%	**40%**	45%	50%
30%	1,149	1,340	1,532	1,723	1,915
35%	1,338	1,561	1,784	2,007	2,229
40%	1,527	1,781	**2,035**	2,290	2,544
45%	1,716	2,001	2,287	2,573	2,859
50%	1,904	2,222	2,539	2,857	3,174

Sources: ANP, Bloomberg, Vibra

Notes: (1) The flow of unbranded stations transitioning into branded ones was estimated, and Vibra's market share within the branded segment was applied

Structure Overview

1. Entry of the PE Fund
2. New Shareholder Block
3. Comerc – *1st Step*: Sell-off to FII

Block Trade

BRL **35.4** Price per Share | **5%** Premium

Cash Out

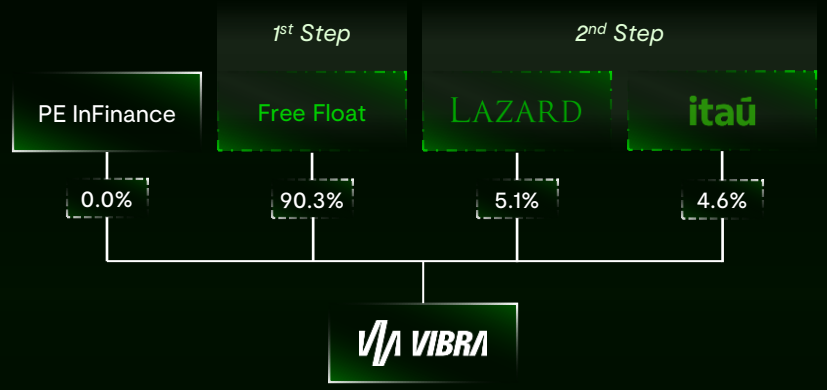

BRL **37.1** Price per Share | **10%** Premium

Entry Details

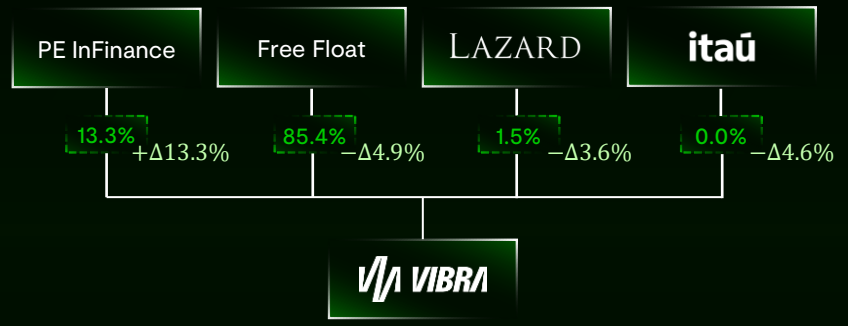

BRL **5,798 mn** Amount Paid | **13.3%** Stake

1. The entry into Vibra will be structured in two stages. The first consists of acquiring free float shares via block trade, building an initial position efficiently. The second stage involves a cash out from both Lazard's and Itaú's existing positions, consolidating a more meaningful stake in the company

Pre Negotiation

Post Negotiation

1st Step

Free Float - Block Trade

A 4.99% free float stake acquired via block trade, keeping PE InFInance below mandatory disclosure thresholds [5%]

2nd Step

Itaú Stake – Cash Out

Itaú's "Carbono Oculto" thesis has played out and is now fully priced, with them progressively reducing their position.

Lazard Stake – Cash Out

Lazard has been a recurrent trader of Moove's shares and has already captured significant returns on their most recent position

Itaú	Unit	24Q4	25Q1	25Q2	25Q3	25Q4	26Q1	26Q2
Number of Shares	[# mn]	97	97	84	84	60	55	55
IRR (Ex-InFinance): 51.2%								
IRR (With InFinance): 58.2%								

Lazard	Unit	24Q4	25Q1	25Q2	25Q3	25Q4	26Q1	26Q2
Number of Shares	[# mn]	-	43	43	43	43	43	43
IRR (Ex-InFinance): 96.3%								
IRR (With InFinance): 111.4%								

Structure Overview

1. Entry of the PE Fund
2. **New Shareholder Block**
3. Comerc – 1st Step: Spin-Off of DG to FII
4. Comerc – 2nd Step: Merger with EDF

PE InFinance Board Influence

Divestiture in Comerc is inevitable in the long term, and two Board seats catalyze this process as this theses becomes a priority

Pre Agreement

13.3% Stake PE InFinance

10.0% Stake Dynamo

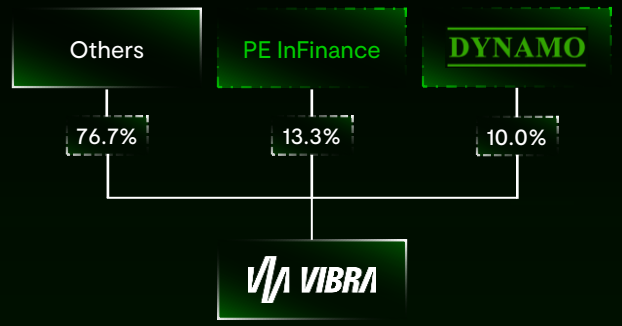

Post Agreement

2 / 7 Board Members

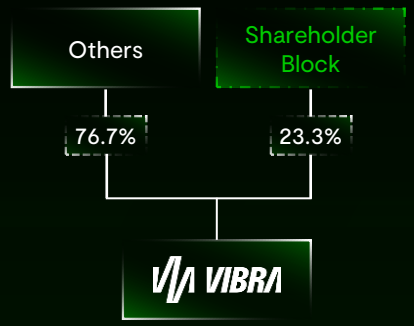

23.3% Stake Shareholder Block

2. PE InFinance and Dynamo would enter into a shareholder's agreement to form a 23.3% block, securing board nomination rights and minority protections. The agreement would formalize governance influence through two board seats, reserved matters and transfer restrictions

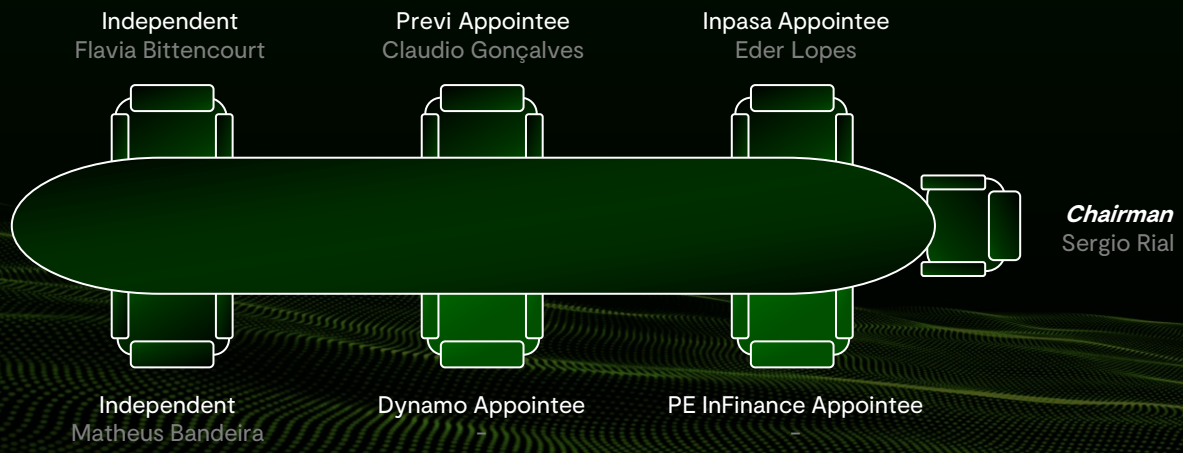

Pre Agreement

Post Agreement

Board Member Post Agreement

Shareholders' Agreement Highlights

Art. 1 – Board Nomination Rights

The shareholder's block, formed by PE InFinance and Dynamo, shall appoint 2 out of 7 Board members. One director shall be elected through separate election and one through cumulative voting.

At least one of the appointed directors shall hold a seat on the Financial Committee or the Statutory Audit Committee.

Art. 2 – Reserved Matters / Minority Veto Rights

Certain strategic decisions shall require prior minority consent:

i. Divestment of Comerc;
ii. Acquisition of Moove;
iii. Related-party transactions;
iv. Net Debt / EBITDA exceeding 2.5x;
v. Amendments to Bylaws, particularly Chapter IX (poison pill);
vi. Delisting from Novo Mercado

Art. 3 – Standstill

The block's combined holdings shall not exceed 24.99% of capital, avoiding the mandatory tender offer trigger under Art. 47 of the Bylaws.

Art. 4 – Programmed Dissolution

The agreement shall have an initial term of 3 years, automatically dissolved upon completion of Comerc deconsolidation. Post-dissolution, PE InFinance retains the right to appoint 1 Board member through individual cumulative voting; Dynamo loses appointment rights.

Structure Overview

1. Entry of the PE Fund
2. New Shareholder Block
3. **Comerc – *1st Step*: Spin-Off of DG to FII**
4. Comerc – *2nd Step*: Merger with EDF
5. Acquisition of Moove
6. Share Swap

Transaction KPIs

14.0% IRR Shareholders Return

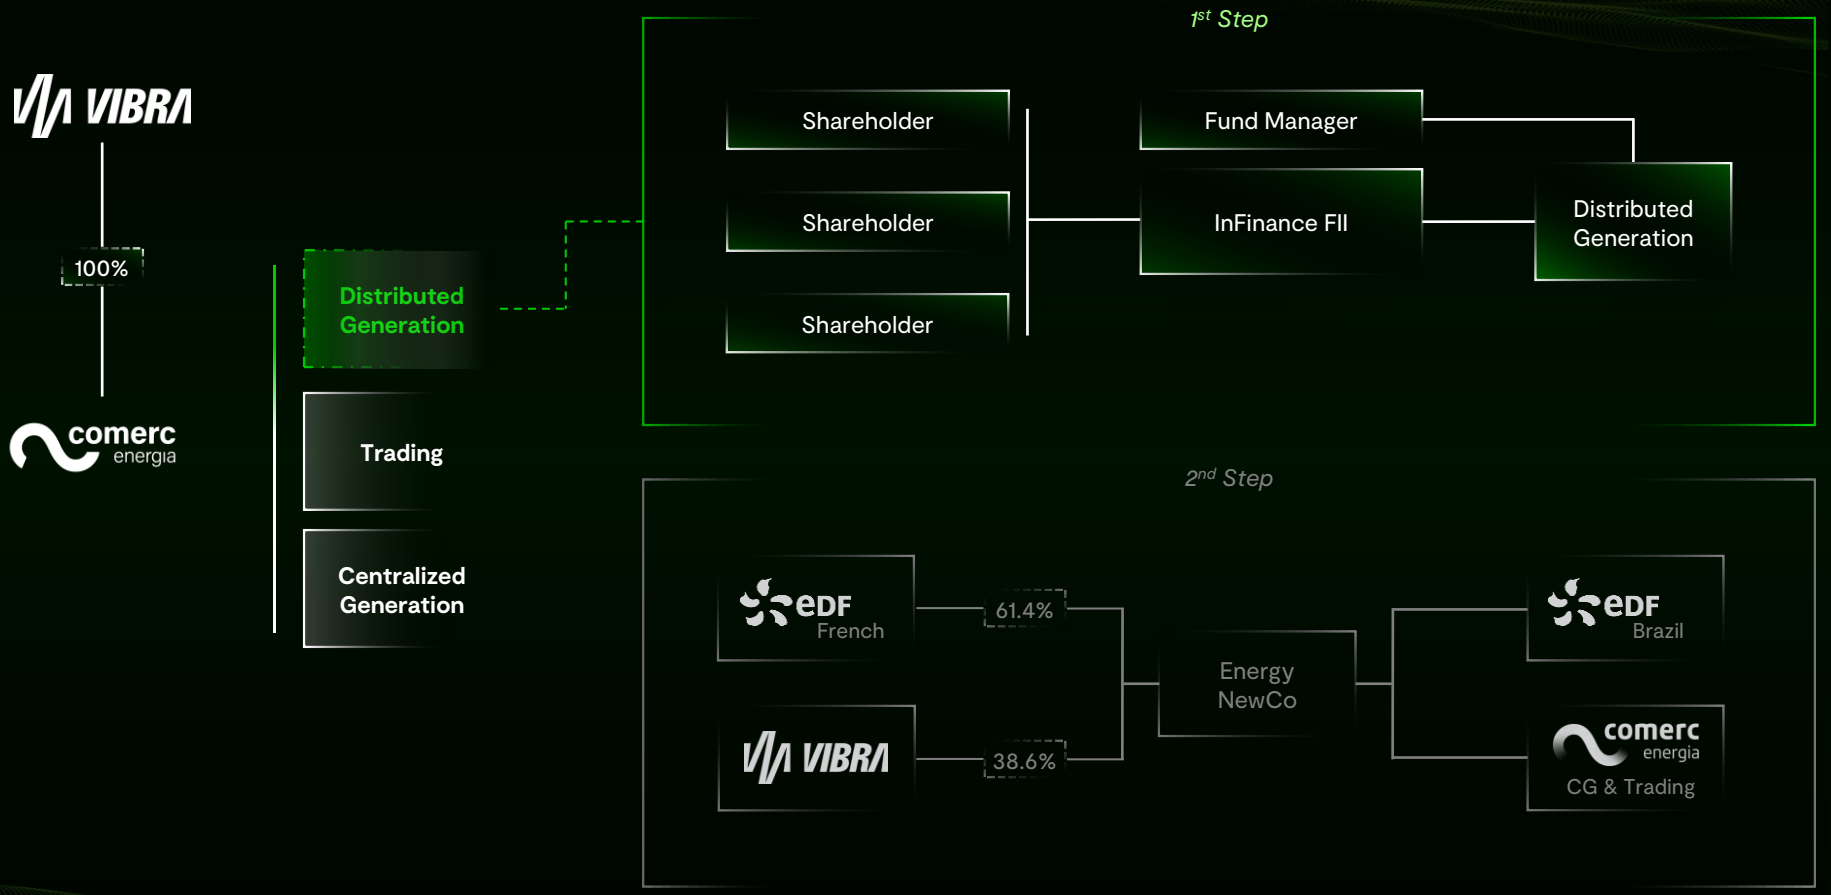

18.1% Premium Paid

DG Valuation

BRL 2,262 mn DG Final Price

8.2x EV/EBITDA

3. We will spin-off Comerc's Distributed Generation platform through an FII, as it is a high-quality asset with no curtailment exposure and a tax-efficient structure, allowing Vibra to capture a valuation premium and unlock cash

Transaction Structure (TS) & Key Assumptions

- ***Key Assumption:*** *Distributed Generation assets remain insulated from curtailment dynamics, sustaining premium trading multiples versus centralized generation platforms*
- ***TS#1:*** *The structure contemplates the spin-off of Distributed Generation assets into a tax-efficient FII vehicle, maximizing value through premium multiples and fiscal efficiency*
- ***TS #2:*** *Distributed Generation assets would be monetized through a dedicated FII structure, while the remaining operations would operate independently*

Structure Overview

2. New Shareholder Block
3. Comerc – *1st Step*: Sell-off to FII
4. **Comerc – *2nd Step*: Merger with EDF**
5. Acquisition of Moove
6. Share Swap

Pre Deal Valuation

BRL 3,317 mn Comerc Equity Value

BRL 5,280 mn EDF Equity Value

Proforma

BRL 725 mn NPV of PMSO Synergies

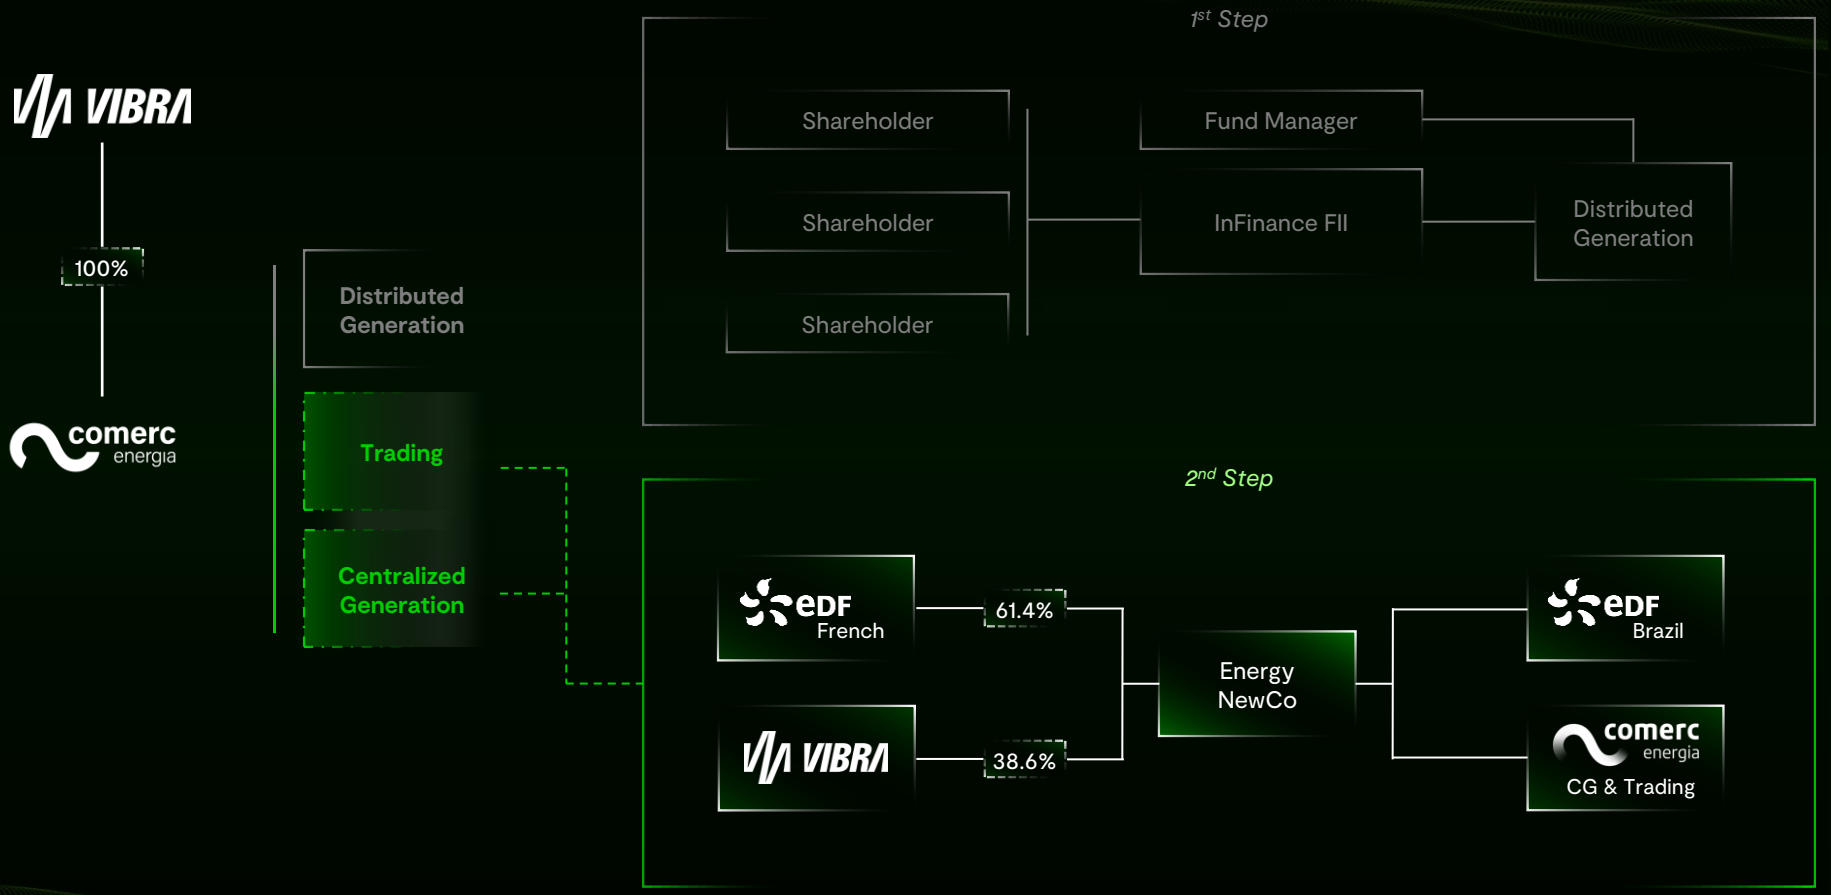

BRL 8,597 mn Proforma Equity Value

Exit

BRL 6,998 mn Vibra's 2030 Exit Value

7.5x Exit EV/EBITDA

4. The remaining Comerc platform would be merged with EDF Brazil in a defensive consolidation move. With revenues largely locked under PPAs, value creation is limited on the top line and must come mainly from PMSO/SG&A synergies. In a pressured market, combining platforms becomes more attractive than competing

Transaction Structure (TS) & Key Assumptions

- ***Key Assumption:*** *Vibra shareholders have expressed their willingness to spin-off Comerc, given its value-dilutive impact on the group, while EDF has recently signaled strategic interest in expanding its renewable energy platform in Brazil*
- ***TS #1:*** *The NewCo would be structured as a co-invested Joint Venture, avoiding the need to consolidate it in their balance sheets, ensuring joint decision-making between both parties*
- ***TS #2:*** *From 2030 to the end of 2031 EDF holds a call option and Vibra holds a put option. This structure provides certainty to Vibra's shareholders on Comerc's exit, with potential upside from margin recovery and a more favorable curtailment environment*

Structure Overview

3. Comerc – 1st Step: Sell-off to FII

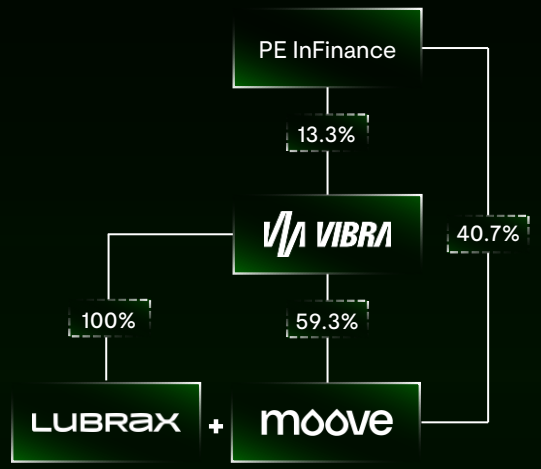

4. Comerc – 2nd Step: Merger with EDF

5. Acquisition of Moove

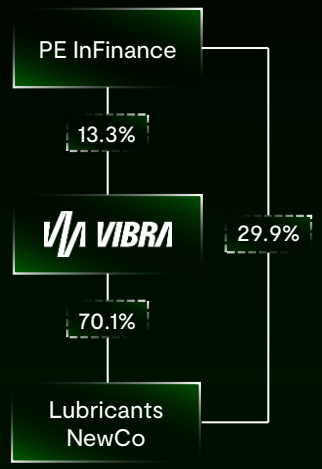

6. Share Swap

5. The Moove acquisition is structured through a PE co-investment and a bridge loan backed by international asset sales, giving Vibra the balance sheet flexibility to complete the deal, divest non-core regions and integrate Moove's Brazil and LatAm platform with Lubrax

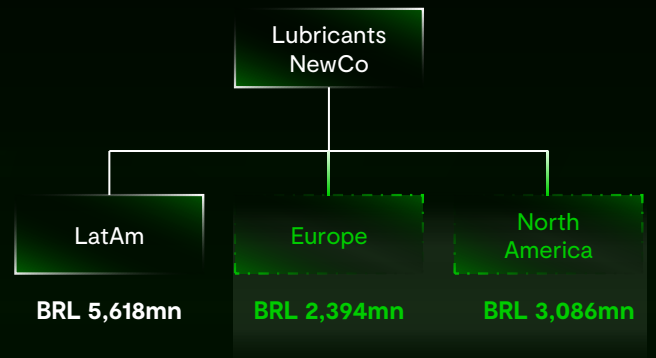

Post-Negotiation: Initial Stage

Post-Negotiation: Second Stage

Sale of International Assets

Lubrax Valuation

BRL 4,015 mn Lubrax Equity Value

6.4x Lubrax EV/EBITDA

Moove Aquisition

BRL 11,098 mn Moove Acquisition Value

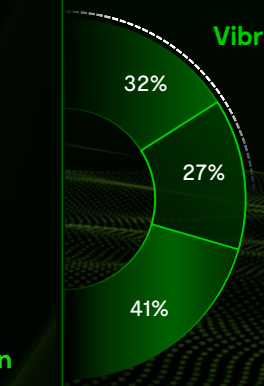

25.7% Premium Paid

Proforma

Moove Equity Value

Vibra´s Share – 32% Cash & 27% Bridge Loan

- ❑ Cash use based on minimum cash
- ❑ Bridge loan backed by planned international divestiture

PE InFinance's Share - 41% Cash

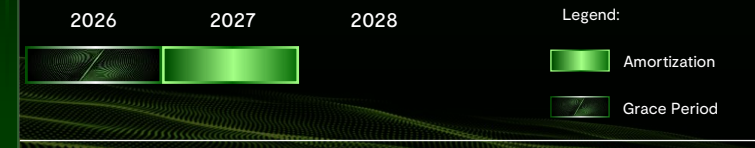

- ❑ International divestiture returns significant cash to PE early in the deal
- ❑ Direct Moove stake captures 3-year synergies above Vibra shares

Bridge Loan

Amount	BRL 3,050mn
Coupon	CDI+ 2.10%
Maturity	3 years
Prepayment Fee	102%

Debt Amortization Schedule

Debt will be prepaid upon the sale of international assets

Structure Overview

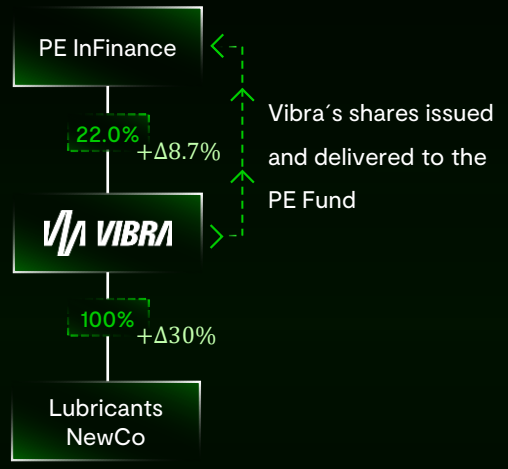

4. Comero – 2nd Step: Merger with EDP

5. Acquisition of Moove

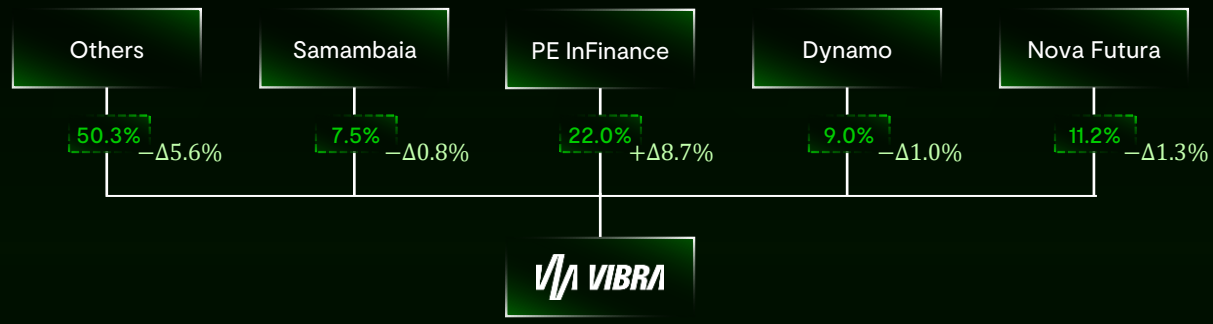

6. Share Swap

6. Vibra issues shares and delivers them to PE InFinance in exchange for its direct NewCo Stake, resulting in a PE InFinance's final 22.0% position in Vibra. Prices are going to be based in Vibra's 3-year VWAP and NewCo in the same multiple paid in Moove. Therefore, raising PE InFinance's risk/return

Share Swap

Final Vibra Shareholder Structure

Block Trade

2029 Share Swap year

BRL 48.1 Price per Share

Shares

133.4 mn Shares Issued

1,332 mn Shares After Swap

Final Stake

BRL 6,414 mn Equity Value Swaped

22.0% Final InFinance Stake

Share Swap Highlights

- **Vibra Reference Price:** *3-year VWAP of Vibra's shares preceding the swap execution*
- **NewCo Reference Price:** *Same multiple as the acquisition (10x EV/EBITDA), and average EBITDA across the last two LTMs*
- **Execution Window:** *24-month window starting on the 3rd anniversary of closing*
- **Anti-Dilution Protection:** *Automatic adjustment for extraordinary dividends, buybacks, splits, and below-market capital increases*
- **Payoff Profile:** *PE InFinance gains more when Vibra's share price rises and loses more when it falls, mitigating Vibra's risk exposure to the thesis*

Transaction Structure Summary

Final Vibra Structure

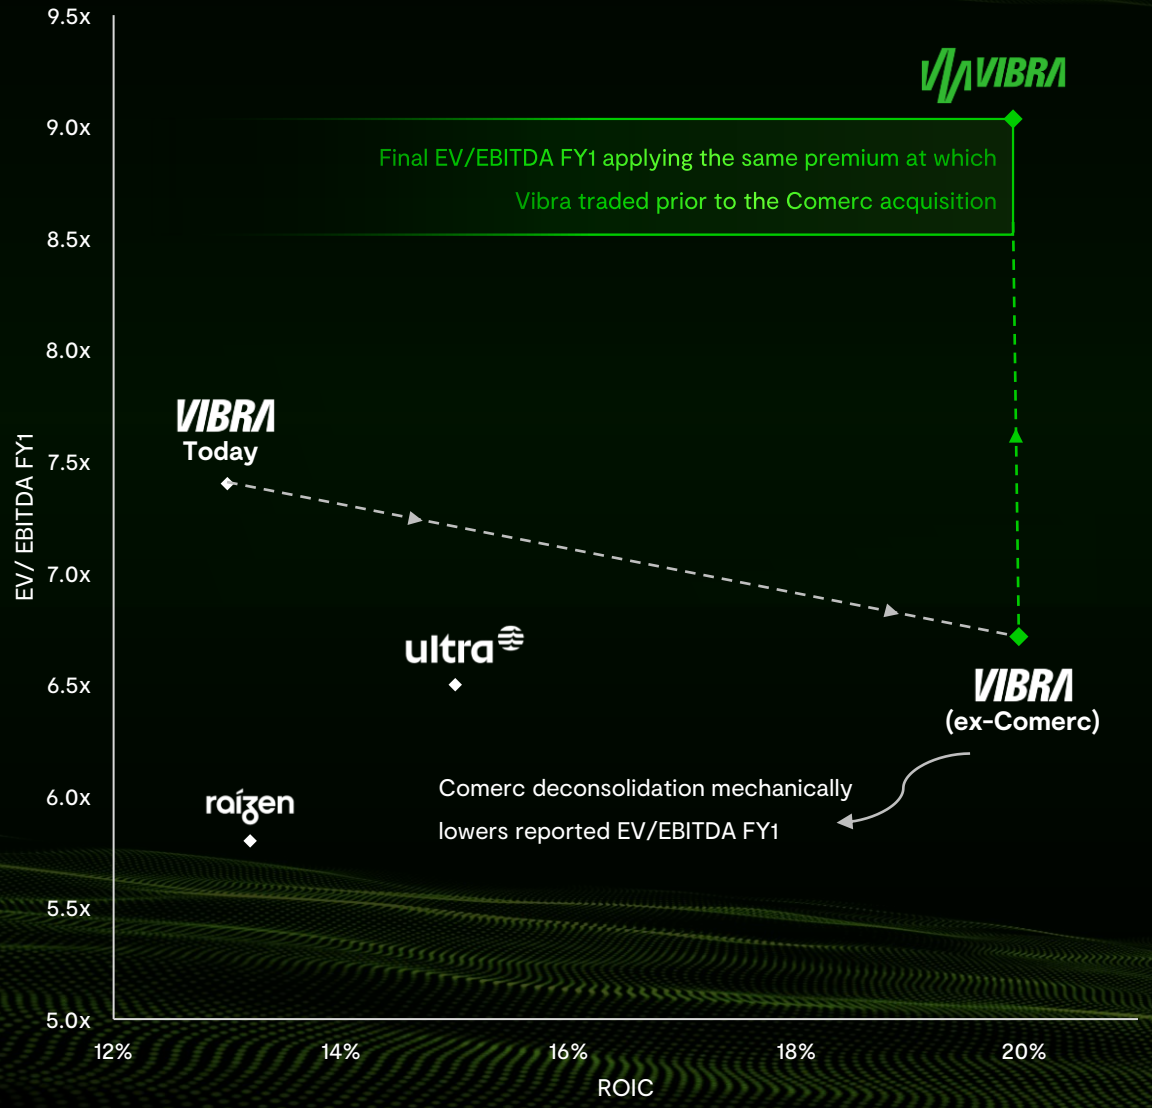

Key Assumptions & Commentary

- PE fund total equity investment: BRL 10.3 bn
- 3 years average VWAP based share swap
- Bridge debt paid upon disinvestment of Moove´s international assets
- Shareholders block dissolved upon divestiture of Comerc
- Energy NewCo to be sold between 2030-2031

Driving Value Creation

Comerc's spin-off enhances capital allocation efficiency, while Moove's acquisition supports long-term earnings accretion and multiple expansion

Comerc's deconsolidation increases ROIC and supports a multiple re-rating

Moove's aquisition proves to be accretive in the medium and long term
